General Ledger.

General Ledger will be a fully-featured, multi-user, open-source general ledger system. The project is in the early stages of development.

2 General Ledger.

Todo List

File gluser_pass.cpp

Implement a better form of password encryption. In particular, these functions are not re-entrant, and only use the first 8 characters of the password.

Todo List

Bug List

Member gldb::Table::Table (const Table &table)

'explicit' removed from here after failure to compile at end of MySQL query function.

6 **Bug List**

Module Documentation

8.1 Program configuration module

Classes

class genleg::ConfigException

Configuration module exception base class.

· class genleg::ConfigOptionNotSet

Exception class for option not set.

· class genleg::ConfigBadOption

Exception class for bad provided option.

• class genleg::ConfigCouldNotOpenFile

Exception class for when conf file cannot be opened.

• class genleg::ConfigBadConfigFile

Exception class for badly formed configuration file.

· class genleg::Config

Configuration options class.

Enumerations

• enum genleg::Argument

Enumeration class for option argument specifications.

8.1.1 Detailed Description

Module for getting options from the command line and configuration files.

18 Module Documentation

8.2 Database interaction module

Classes

class gldb::DBConnException

Base database connection exception class.

class gldb::DBConnCouldNotConnect

Could not connect to database exception class.

class gldb::DBConnCouldNotQuery

Could not execute database query exception class.

· class gldb::DBConn

Database connection class.

class gldb::DBConnImp

Abstract database implementation base class.

• class gldb::TableException

Base database connection exception class.

· class gldb::TableNoSuchField

No such field exception class.

· class gldb::TableNoSuchRecord

No such record exception class.

· class gldb::TableMismatchedRecordLength

Mismatched record length exception class.

· class gldb::TableBadInputFile

Could not connect to database exception class.

• class gldb::TableCouldNotOpenInputFile

Could not connect to database exception class.

· class gldb::Table

Database table class.

· class gldb::TableField

Database table field class.

· class gldb::TableRow

Database table row class.

class gldb::DBConnDummy

Dummy database implementation class.

· class gldb::DBConnMySQL

MySQL database implementation class.

class gldb::MySQLResult

MySQL result structure class.

Functions

DBConnImp * gldb::get_connection (const std::string &database, const std::string &hostname, const std::string &username, const std::string &password)

Creates and returns a pointer to a database implementation.

• std::string gldb::get_database_type ()

Returns the name of the compiled-in database type.

static TableRow get_field_names (MySQLResult &result)

Gets field names from a MySQL result structure.

static TableRow get_row (MySQLResult &result, MYSQL_ROW row)

Creates a TableRow from a MySQL result row.

8.2.1 Detailed Description

Module for interacting with the database.

8.2.2 Function Documentation

8.2.2.1 DBConnImp * gldb::get_connection (const std::string & database, const std::string & hostname, const std::string & username, const std::string & password)

Creates and returns a pointer to a database implementation.

The implementation of this function is provided by the individual database implementations. One database implementation is compiled into the program at any one time. Multiple database systems are, or will be, supported, and not every system will possess the libraries and headers to compile every implementation. Therefore, only only implementation is compiled in at a time. The fact that each database implementation will implement this function to return the correct derived class prevents any attempt to compile unsupported library code. This would not be feasible if we were to simply provide each implementation as a subclass.

Parameters

database	The name of the database to which to connect.
hostname	The hostname of the computer running the database.
username	The username with which to log into the database.
password	The password with which to log into the database.

Returns

A pointer to the database implementation.

8.2.2.2 std::string gldb::get_database_type ()

Returns the name of the compiled-in database type.

Returns

The name of the compiled-in database type.

8.2.2.3 static TableRow get_field_names (MySQLResult & result) [static]

Gets field names from a MySQL result structure.

Parameters

ſ	result	The MySQL result structure.

Returns

A TableRow containing the field names.

8.2.2.4 static TableRow get_row (MySQLResult & result, MYSQL_ROW row) [static]

Creates a TableRow from a MySQL result row.

Parameters

result	The MySQL result structure.
row	The MySQL row structure.

Returns

A TableRow containing the row data.

8.3 SQL statements module

Classes

• class genleg::DBSQLDummy

Dummy SQL statements class.

• class genleg::DBSQLMySQL

MySQL SQL statements class.

• class genleg::DBSQLStatements

SQL statements class.

8.3.1 Detailed Description

Module for producing SQL statements used by program.

8.4 General Ledger database module.

Classes

· class genleg::GLDatabase

General ledger database class.

• class genleg::GLDBTransaction

Database transaction RAII class.

class genleg::GLEntity

General ledger entity class.

· class genleg::GLDBException

Base general ledger database exceptionc class.

· class genleg::GLJELine

Journal entry line class.

class genleg::GLJournal

Journal entry class.

· class genleg::GLReport

General ledger report class.

· class genleg::GLUser

General ledger user class.

· class pgutils::CurrencyException

Base Currency exception class.

Functions

static std::vector< size_t > max_column_widths (const gldb::Table &table)

Calculates the maximum required column widths for a table.

static void grow_widths (std::vector < size_t > &widths, const TableRow &row)

Increments a vector of required column widths.

static std::string separator_row (const std::vector< size_t > &widths)

Returns a decorated separator row for a table.

• static std::string plain_row (const TableRow &row, const std::vector< size_t > &widths)

Returns a row for a plain report.

static std::string decorated_row (const TableRow &row, const std::vector< size_t > &widths)

Returns a row for a decorated report.

• std::string genleg::plain_report_from_table (const gldb::Table &table)

Creates a plain report from a table.

• std::string genleg::decorated_report_from_table (const gldb::Table &table)

Creates a decorated report from a table.

8.4.1 Detailed Description

Module for interacting with the general ledger database model.

8.4.2 Function Documentation

8.4.2.1 std::string genleg::decorated_report_from_table (const gldb::Table & table)

Creates a decorated report from a table.

A "decorated report" presents the table surrounding with ASCII-art style lines consisting of '+', '-' and $'\mid$ characters.

Parameters

table	The table from which to create the report.

Returns

A string containing the report.

8.4.2.2 static std::string decorated_row (const TableRow & row, const std::vector < size_t > & widths) [static]

Returns a row for a decorated report.

Parameters

row	The row for which to create the report row.
widths	A vector of required widths.

Returns

A string containing the decorated row.

8.4.2.3 static void grow_widths (std::vector < size_t > & widths, const TableRow & row) [static]

Increments a vector of required column widths.

Each element of the vector is increased to fit the width of each file in the row, if the existing width is not large enough to contain it.

Parameters

widths	An existing vector of widths.
row	The row against which to check and potentially increase the vector.

8.4.2.4 static std::vector < size_t > max_column_widths (const gldb::Table & table) [static]

Calculates the maximum required column widths for a table.

Parameters

table	The table.

Returns

A vector of size_t containing the maximum required width for each column, without padding.

8.4.2.5 std::string genleg::plain_report_from_table (const gldb::Table & table)

Creates a plain report from a table.

A "plain report" separates each column with a space.

	table	The table from which to create the report.
--	-------	--

Returns

A string containing the report.

8.4.2.6 static std::string plain_row (const TableRow & row, const std::vector < size_t > & widths) [static]

Returns a row for a plain report.

Parameters

row	The row for which to create the report row.
widths	A vector of required widths.

Returns

A string containing the plain row.

8.4.2.7 static std::string separator_row (const std::vector < size_t > & widths) [static]

Returns a decorated separator row for a table.

The "separator row" is of the format "+—+—+—+" where each column is separated by a '+' character, and consists of enough '-' characters to fit the respective width in the vector plus two additional characters for spacing.

Parameters

widths	A vector of required widths.

Returns

A string containing the separator row.

8.5 General purpose utilities.

Classes

· class pgutils::Currency

Currency amount class.

Functions

Currency pgutils::operator+ (Currency lhs, const Currency &rhs)

Currency addition operator.

• Currency pgutils::operator- (Currency lhs, const Currency &rhs)

Currency subtraction operator.

• bool pgutils::operator== (const Currency &lhs, const Currency &rhs)

Currency equality comparison operator.

• bool pgutils::operator!= (const Currency &lhs, const Currency &rhs)

Currency inequality comparison operator.

bool pgutils::operator< (const Currency &lhs, const Currency &rhs)

Currency less than comparison operator.

bool pgutils::operator> (const Currency &lhs, const Currency &rhs)

Currency greater than comparison operator.

bool pgutils::operator<= (const Currency &lhs, const Currency &rhs)

Currency less than or equal to comparison operator.

bool pgutils::operator>= (const Currency &lhs, const Currency &rhs)

Currency greater than or equal to comparison operator.

Currency pgutils::currency_from_string (const std::string &s)

Creates a currency amount from a string representation.

std::string & pgutils::trim_front (std::string &s)

Trims leading whitespace from a string.

std::string & pgutils::trim_back (std::string &s)

Trims trailing whitespace from a string.

• std::string & pgutils::trim (std::string &s)

Trims leading and trailing whitespace from a string.

• std::vector< std::string > pgutils::split (const std::string &s, const char delim)

Splits a delimited string into tokens.

std::vector< std::string > & pgutils::split (std::vector< std::string > &vec, const std::string &s, const char delim)

Splits a delimited string into tokens.

bool pgutils::next_content_line (std::istream &ifs, std::string &s)

Gets the next content line from a stream.

• std::vector< std::string > & pgutils::content lines (std::vector< std::string > &vec, std::istream &ifs)

Populates a vector of content lines from a stream.

std::vector< std::vector

< std::string > > & pgutils::split_lines (std::vector< std::vector< std::string >> &vec, std::istream &ifs, const char delim)

Populates a vector of vectors of fields from a stream.

• std::string & pgutils::join (const std::vector< std::string > &vec, std::string &s, const char delim)

Joins a vector of strings into a delimited line.

• bool pgutils::replace (std::string &str, const std::string &from, const std::string &to)

Replaces a substring with another string.

8.5.1 Detailed Description

General purpose utility classes and functions.

8.5.2 Function Documentation

8.5.2.1 std::vector< std::string > & pgutils::content_lines (std::vector< std::string > & vec, std::istream & ifs)

Populates a vector of content lines from a stream.

Parameters

vec	The vector to populate.
ifs	The input stream.

Returns

A reference to vec.

8.5.2.2 Currency pgutils::currency_from_string (const std::string & s)

Creates a currency amount from a string representation.

Parameters

s	The string representation.

Returns

The currency representation.

8.5.2.3 std::string & pgutils::join (const std::vector < std::string > & vec, std::string & s, const char delim)

Joins a vector of strings into a delimited line.

The function is the opposite of split.

Parameters

vec	The vector containing the strings.
s	The string in which to store the line.
delim	The delimiter character to be used to delimit the fields.

Returns

A reference to s.

8.5.2.4 bool pgutils::next_content_line (std::istream & ifs, std::string & s)

Gets the next content line from a stream.

A "content line" is defined as a line which, after being trimmed of trailing and leading whitespace, is not empty, and does not start with a '#' character (indicating a comment line).

Parameters

ifs	The input stream.
s	The string in which to store the line.

Returns

true if there is a next content line, false otherwise.

8.5.2.5 bool pgutils::operator!= (const Currency & Ihs, const Currency & rhs)

Currency inequality comparison operator.

Parameters

lhs	Left hand side.
rhs	Right hand side.

Return values

true	If the two sides are not equal.
false	If the two sides are equal.

8.5.2.6 Currency pgutils::operator+ (Currency lhs, const Currency & rhs)

Currency addition operator.

Parameters

lhs	Left hand side.
rhs	Right hand side.

Returns

The sum of the two sides.

8.5.2.7 Currency pgutils::operator- (Currency lhs, const Currency & rhs)

Currency subtraction operator.

Parameters

lhs	Left hand side.
rhs	Right hand side.

Returns

The difference between the two sides.

8.5.2.8 bool pgutils::operator < (const Currency & *lhs*, const Currency & *rhs*)

Currency less than comparison operator.

Parameters

lhs	Left hand side.
rhs	Right hand side.

Return values

true	If the lhs is less than the rhs.
false	If the lhs is not less than the rhs.

8.5.2.9 bool pgutils::operator<= (const Currency & *lhs*, const Currency & *rhs*)

Currency less than or equal to comparison operator.

Parameters

lhs	Left hand side.
rhs	Right hand side.

Return values

true	If the lhs is less than or equal to the rhs.
false	If the lhs is not less than or equal to the rhs.

8.5.2.10 bool pgutils::operator== (const Currency & lhs, const Currency & rhs)

Currency equality comparison operator.

Parameters

lhs	Left hand side.
rhs	Right hand side.

Return values

true	If the two sides are equal.
false	If the two sides are not equal.

8.5.2.11 bool pgutils::operator> (const Currency & Ihs, const Currency & rhs)

Currency greater than comparison operator.

Parameters

lhs	Left hand side.
rhs	Right hand side.

Return values

true	If the lhs is greater than the rhs.
false	If the lhs is not greater than the rhs.

8.5.2.12 bool pgutils::operator>= (const Currency & Ihs, const Currency & rhs)

Currency greater than or equal to comparison operator.

Parameters

lhs	Left hand side.
rhs	Right hand side.

Return values

true	If the lhs is greater than or equal to the rhs.
false	If the lhs is not greater than or equal to the rhs.

8.5.2.13 bool pgutils::replace (std::string & str, const std::string & from, const std::string & to)

Replaces a substring with another string.

Parameters

str	The string containing the substring to replace.
from	The substring to replace.
to	The string with which to replace the substring.

Returns

true if a replacement was made, false otherwise.

8.5.2.14 std::vector < std::string > pgutils::split (const std::string & s, const char delim)

Splits a delimited string into tokens.

Parameters

s	The string to split.
delim	The delimiter character on which to split.

Returns

A vector of tokens.

 $8.5.2.15 \quad \text{std::vector} < \text{std::string} > \& \ \textit{pgutils::split} \ (\ \text{std::vector} < \text{std::string} > \& \ \textit{vec}, \ \text{const std::string} \ \& \ \textit{s}, \ \text{const char} \ \textit{delim} \)$

Splits a delimited string into tokens.

vec	The vector into which to add the tokens.
s	The string to split.
delim	The delimiter character on which to split.

Returns

A reference to vec.

8.5.2.16 std::vector < std::vector < std::string >> & pgutils::split_lines (std::vector < std::vector < std::string >> & vec, std::istream & ifs, const char delim)

Populates a vector of vectors of fields from a stream.

Parameters

vec	The vector to populate.
ifs	The input stream.
delim	The delimiter character to split each content line.

Returns

A reference to vec.

8.5.2.17 std::string & pgutils::trim (std::string & s)

Trims leading and trailing whitespace from a string.

Parameters

S	The string to trim.

Returns

The trimmed string.

8.5.2.18 std::string & pgutils::trim_back (std::string & s)

Trims trailing whitespace from a string.

Parameters

s	The string to trim.

Returns

The trimmed string.

8.5.2.19 std::string & pgutils::trim_front (std::string & s)

Trims leading whitespace from a string.

S	The string to trim.
---	---------------------

Returns

The trimmed string.

8.6 Database program.

Functions

static void set_configuration (Config &config, int argc, char *argv[])

Sets program configuration options.

static bool check_help_and_version (const Config &config)

Prints help or version messages if requested.

static bool check_db_parameters (const Config &config)

Checks if database, hostname and username were provided.

static void print_usage_message ()

Prints a program usage message.

static void print_version_message ()

Prints a program version message.

• static void print_help_message ()

Prints a program help message.

static std::string login (void)

Gets a password from the terminal.

• int main (int argc, char *argv[])

Main function.

Variables

static const char * progname = "gl_db"
 Static variable for program name.

8.6.1 Detailed Description

Administrative database management program.

8.6.2 Function Documentation

8.6.2.1 static bool check_db_parameters (const Config & config) [static]

Checks if database, hostname and username were provided.

Parameters

config Reference to a Config object.

Returns

true if the information was provided, false otherwise.

8.6.2.2 static bool check_help_and_version (const Config & config) [static]

Prints help or version messages if requested.

config	Reference to a Config object.

Returns

true if the help or version message was requested, false otherwise.

8.6.2.3 static std::string login (void) [static]

Gets a password from the terminal.

Returns

The password.

8.6.2.4 int main (int argc, char * argv[])

Main function.

Parameters

argc	Number of command line arguments.
argv	Command line arguments.

Returns

Exit status code.

8.6.2.5 static void set_configuration (Config & config, int argc, char * argv[]) [static]

Sets program configuration options.

config	Reference to a Config object.
argc	argc passed to main().
argv	argv passed to main().

8.7 Reporting program.

Functions

• static void set_configuration (Config &config, int argc, char *argv[])

Sets program configuration options.

• static bool check_help_and_version (const Config &config)

Prints help or version messages if requested.

static bool check_db_parameters (const Config &config)

Checks if database, hostname and username were provided.

static void print_usage_message ()

Prints a program usage message.

static void print_version_message ()

Prints a program version message.

• static void print_help_message ()

Prints a program help message.

static std::string login (void)

Gets a password from the terminal.

• int main (int argc, char *argv[])

Main function.

Variables

static const char * progname = "gl_report"
 Static variable for program name.

8.7.1 Detailed Description

Administrative reporting program.

8.7.2 Function Documentation

8.7.2.1 static bool check_db_parameters (const Config & config) [static]

Checks if database, hostname and username were provided.

Parameters

config	Reference to a Config object.
COHILI	i neletetice to a Cottilo object.

Returns

true if the information was provided, false otherwise.

8.7.2.2 static bool check_help_and_version (const Config & config) [static]

Prints help or version messages if requested.

config	Reference to a Config object.

Returns

true if the help or version message was requested, false otherwise.

8.7.2.3 static std::string login (void) [static]

Gets a password from the terminal.

Returns

The password.

8.7.2.4 int main (int argc, char * argv[])

Main function.

Parameters

argc	Number of command line arguments.
argv	Command line arguments.

Returns

Exit status code.

8.7.2.5 static void set_configuration (Config & config, int argc, char * argv[]) [static]

Sets program configuration options.

config	Reference to a Config object.
argc	argc passed to main().
argv	argv passed to main().

8.8 User administration program.

Functions

static void set_configuration (Config &config, int argc, char *argv[])

Sets program configuration options.

static bool check_help_and_version (const Config &config)

Prints help or version messages if requested.

static bool check_db_parameters (const Config &config)

Checks if database, hostname and username were provided.

• GLUser get_user (Config &config, GLDatabase &gdb)

Returns a user from either an ID or a name.

static void show_user_details (const GLUser &user)

Outputs details for a user.

• static void enable_user (GLUser &user, Config &config, GLDatabase &gdb)

Enables or disables a user.

• static void set_user_password (GLUser &user, Config &config, GLDatabase &gdb)

Sets a user's password.

• static void check_user_password (GLUser &user, Config &config)

Checks a user's password.

• static void print_usage_message ()

Prints a program usage message.

• static void print_version_message ()

Prints a program version message.

• static void print_help_message ()

Prints a program help message.

• static std::string login (void)

Gets a password from the terminal.

• int main (int argc, char *argv[])

Main function.

Variables

static const char * progname = "gl_user"
 Static variable for program name.

8.8.1 Detailed Description

User administration program.

8.8.2 Function Documentation

8.8.2.1 static bool check_db_parameters (const Config & config) [static]

Checks if database, hostname and username were provided.

config Reference to a Config object.
--

Returns

true if the information was provided, false otherwise.

8.8.2.2 static bool check_help_and_version (const Config & config) [static]

Prints help or version messages if requested.

Parameters

config	Reference to a Config object.

Returns

true if the help or version message was requested, false otherwise.

8.8.2.3 static void check_user_password (GLUser & user, Config & config) [static]

Checks a user's password.

Parameters

user	Reference to user.
config	Reference to program configuration options.

8.8.2.4 static void enable_user (GLUser & user, Config & config, GLDatabase & gdb) [static]

Enables or disables a user.

Parameters

user	Reference to user.
config	Reference to program configuration.
gdb	Reference to database object.

8.8.2.5 GLUser get_user (Config & config, GLDatabase & gdb)

Returns a user from either an ID or a name.

Parameters

	config	Program configurations object.
ĺ	gdb	Database object.

Returns

The user.

8.8.2.6 static std::string login (void) [static]

Gets a password from the terminal.

Returns

The password.

8.8.2.7 int main (int argc, char * argv[])

Main function.

Parameters

argc	Number of command line arguments.
argv	Command line arguments.

Returns

Exit status code.

8.8.2.8 static void set_configuration (Config & config, int argc, char * argv[]) [static]

Sets program configuration options.

Parameters

config	Reference to a Config object.
argc	argc passed to main().
argv	argv passed to main().

8.8.2.9 static void set_user_password (GLUser & user, Config & config, GLDatabase & gdb) [static]

Sets a user's password.

Parameters

user	Reference to user.
config	Reference to program configuration.
gdb	Reference to database object.

8.8.2.10 static void show_user_details (const GLUser & user) [static]

Outputs details for a user.

user	Reference to user.

Chapter 9

Class Documentation

9.1 genleg::Config Class Reference

```
Configuration options class.
```

```
#include <config.h>
```

Public Member Functions

- Config ()
- \sim Config ()
- void add_cmdline_option (const std::string option, const enum Argument arg)

Adds a supported command line option.

void populate_from_cmdline (const int argc, char *const *argv)

Populates options from the command line.

void populate_from_file (const std::string filename)

Populates options from a configuration file.

• bool is_set (const std::string option) const

Checks is an option is set.

 const std::string & operator[] (const std::string &option) const operator[] overload.

Private Attributes

```
    std::map< std::string,
std::string > m_opts_set
    std::list< std::pair</li>
    std::string, enum Argument >> m_opts_supp
```

9.1.1 Detailed Description

Configuration options class.

9.1.2 Constructor & Destructor Documentation

```
9.1.2.1 Config::Config()
```

Constructor

9.1.2.2 Config:: ∼Config ()

Destructor

9.1.3 Member Function Documentation

9.1.3.1 void Config::add_cmdline_option (const std::string option, const enum Argument arg)

Adds a supported command line option.

Parameters

option	The name of the option.
arg	The argument specification for the option.

9.1.3.2 bool Config::is_set (const std::string option) const

Checks is an option is set.

Parameters

option	The name of the option to check.

Returns

true if the option has been set, false if it has not.

9.1.3.3 const std::string & Config::operator[] (const std::string & option) const

operator[] overload.

Retrieves the value of a set option.

Parameters

option	The name of the option.

Returns

The value of the option.

Exceptions

ConfigOptionNotSet If the named option has not been set.

9.1.3.4 void Config::populate_from_cmdline (const int argc, char *const * argv)

Populates options from the command line.

argc	argc supplied to main().
argv	argv supplied to main().

Exceptions

ConfigBadOption	If an unsupported option is specified, or if a required argument is missing, or if an unex-
	pected argument is found.

9.1.3.5 void Config::populate_from_file (const std::string filename)

Populates options from a configuration file.

Parameters

filename	The name of the configuration file.

Exceptions

ConfigCouldNotOpenFile	If the configuration file cannot be opened.
ConfigBadConfigFile	If the configuration file is badly formed.

9.1.4 Member Data Documentation

9.1.4.1 std::map<std::string, std::string> genleg::Config::m_opts_set [private]

Map of options which have been set

9.1.4.2 std::list<std::pair<std::string, enum Argument>> genleg::Config::m_opts_supp [private]

List of options which are supported

The documentation for this class was generated from the following files:

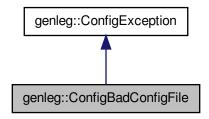

- lib/config/config.h
- lib/config/config.cpp
- lib/config/config_getopt.cpp

9.2 genleg::ConfigBadConfigFile Class Reference

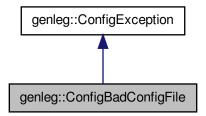

Exception class for badly formed configuration file.

#include <config.h>

Inheritance diagram for genleg::ConfigBadConfigFile:

Collaboration diagram for genleg::ConfigBadConfigFile:

Public Member Functions

ConfigBadConfigFile (const std::string &msg)
 Constructor.

9.2.1 Detailed Description

Exception class for badly formed configuration file.

9.2.2 Constructor & Destructor Documentation

9.2.2.1 genleg::ConfigBadConfigFile::ConfigBadConfigFile (const std::string & msg) [inline], [explicit]

Constructor.

Parameters

msg	Database error message	

The documentation for this class was generated from the following file:

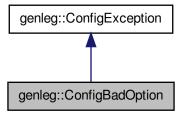

• lib/config/config.h

9.3 genleg::ConfigBadOption Class Reference

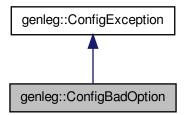

Exception class for bad provided option.

#include <config.h>

Inheritance diagram for genleg::ConfigBadOption:

Collaboration diagram for genleg::ConfigBadOption:

Public Member Functions

ConfigBadOption (const std::string &msg)
 Constructor.

9.3.1 Detailed Description

Exception class for bad provided option.

9.3.2 Constructor & Destructor Documentation

9.3.2.1 genleg::ConfigBadOption::ConfigBadOption (const std::string & msg) [inline], [explicit]

Constructor.

Parameters

msg	Database error message	1

The documentation for this class was generated from the following file:

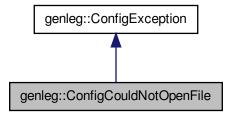

• lib/config/config.h

9.4 genleg::ConfigCouldNotOpenFile Class Reference

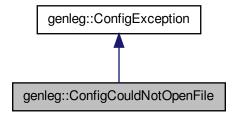

Exception class for when conf file cannot be opened.

```
#include <config.h>
```

Inheritance diagram for genleg::ConfigCouldNotOpenFile:

 $Collaboration\ diagram\ for\ genleg:: ConfigCouldNotOpenFile:$

Public Member Functions

ConfigCouldNotOpenFile (const std::string &msg)
 Constructor.

9.4.1 Detailed Description

Exception class for when conf file cannot be opened.

9.4.2 Constructor & Destructor Documentation

Constructor.

Parameters

```
msg Database error message
```

The documentation for this class was generated from the following file:

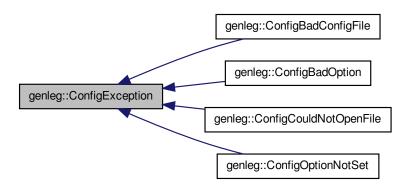

· lib/config/config.h

9.5 genleg::ConfigException Class Reference

Configuration module exception base class.

#include <config.h>

Inheritance diagram for genleg::ConfigException:

Public Member Functions

ConfigException (const std::string &msg)
 Constructor.

9.5.1 Detailed Description

Configuration module exception base class.

9.5.2 Constructor & Destructor Documentation

9.5.2.1 genleg::ConfigException::ConfigException (const std::string & msg) [inline], [explicit]

Constructor.

Parameters

```
msg Database error message
```

The documentation for this class was generated from the following file:

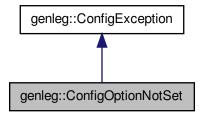

• lib/config/config.h

9.6 genleg::ConfigOptionNotSet Class Reference

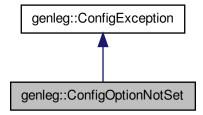

Exception class for option not set.

#include <config.h>

Inheritance diagram for genleg::ConfigOptionNotSet:

Collaboration diagram for genleg::ConfigOptionNotSet:

Public Member Functions

ConfigOptionNotSet (const std::string &msg)

Constructor.

9.6.1 Detailed Description

Exception class for option not set.

9.6.2 Constructor & Destructor Documentation

9.6.2.1 genleg::ConfigOptionNotSet::ConfigOptionNotSet (const std::string & msg) [inline], [explicit]

Constructor.

Parameters

msg Database error message

The documentation for this class was generated from the following file:

· lib/config/config.h

9.7 pgutils::Currency Class Reference

Currency amount class.

```
#include <currency.h>
```

Public Member Functions

• Currency (const int64_t i=0, const uint8_t f=0)

Constructor.

· Currency operator- () const

Unary negation opertor.

Currency & operator+= (const Currency &rhs)

Addition assignment operator.

Currency & operator= (const Currency &rhs)

Subtraction assignment operator.

Private Member Functions

• int64_t expand () const

Returns a Currency amount as a whole integer.

Private Attributes

- int64 t m int
- int m_frac

Friends

• bool operator== (const Currency &lhs, const Currency &rhs)

Currency equality comparison operator.

bool operator< (const Currency &lhs, const Currency &rhs)

Currency less than comparison operator.

Currency operator+ (Currency Ihs, const Currency &rhs)

Currency addition operator.

9.7.1 Detailed Description

Currency amount class.

9.7.2 Constructor & Destructor Documentation

9.7.2.1 pgutils::Currency::Currency (const int64_t i = 0, const uint8_t f = 0) [inline], [explicit]

Constructor.

Parameters

i	The integer part.
f	The fractional part.

9.7.3 Member Function Documentation

9.7.3.1 int64_t pgutils::Currency::expand() const [inline], [private]

Returns a Currency amount as a whole integer.

Returns

The Currency amount expanded to a whole integer, equivalent to multiplying it by 100.

9.7.3.2 Currency & Currency::operator+= (const Currency & rhs)

Addition assignment operator.

Parameters

rhs	Right hand side currency amount.

Returns

A reference to the original currency amount.

9.7.3.3 Currency pgutils::Currency::operator-() const [inline]

Unary negation opertor.

Returns

The negated currency amount.

9.7.3.4 Currency & Currency::operator-= (const Currency & rhs)

Subtraction assignment operator.

Parameters

	D' LLL L L L
rhs	Right hand side currency amount.
1110	riight hand side currency amount.

Returns

A reference to the original currency amount.

9.7.4 Friends And Related Function Documentation

9.7.4.1 Currency operator+ (Currency lhs, const Currency & rhs) [friend]

Currency addition operator.

Friend addition operator function

Parameters

lhs	Left hand side.
rhs	Right hand side.

Returns

The sum of the two sides.

9.7.4.2 bool operator < (const Currency & lhs, const Currency & rhs) [friend]

Currency less than comparison operator.

Friend less than comparison operator function

Parameters

lhs	Left hand side.
rhs	Right hand side.

Return values

true	If the lhs is less than the rhs.
false	If the lhs is not less than the rhs.

9.7.4.3 bool operator== (const Currency & *lhs*, const Currency & *rhs*) [friend]

Currency equality comparison operator.

Friend equality operator function

lhs	Left hand side.
rhs	Right hand side.

Return values

true	If the two sides are equal.
false	If the two sides are not equal.

9.7.5 Member Data Documentation

9.7.5.1 int pgutils::Currency::m_frac [private]

Fractional part

9.7.5.2 int64_t pgutils::Currency::m_int [private]

Integer part

The documentation for this class was generated from the following files:

- lib/pgutils/currency.cpp

9.8 pgutils::CurrencyException Class Reference

Base Currency exception class.

#include <currency.h>

Public Member Functions

CurrencyException (const std::string &msg)
 Constructor.

9.8.1 Detailed Description

Base Currency exception class.

9.8.2 Constructor & Destructor Documentation

9.8.2.1 pgutils::CurrencyException::CurrencyException (const std::string & msg) [inline], [explicit]

Constructor.

Parameters

msg	Database error message

The documentation for this class was generated from the following file:

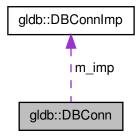

· lib/pgutils/currency.h

9.9 gldb::DBConn Class Reference

Database connection class.

#include <dbconn.h>

Collaboration diagram for gldb::DBConn:

Public Member Functions

• DBConn (DBConnImp *imp)

Constructor.

• ∼DBConn ()

Destructor..

void query (const std::string &sql_query)

Runs an SQL query.

• Table select (const std::string &query)

Runs an SQL SELECT query.

void begin_transaction ()

Begins a transaction.

• void rollback_transaction ()

Rolls back a transaction.

void commit_transaction ()

Commits a transaction.

· unsigned long long last_auto_increment ()

Returns the last auto incremented value.

- DBConn (const DBConn &)
- DBConn (const DBConn &&)
- DBConn & operator= (const DBConn &)
- DBConn & operator= (const DBConn &&)

Private Attributes

• DBConnImp * m_imp

9.9.1 Detailed Description

Database connection class.

9.9.2 Constructor & Destructor Documentation

9.9.2.1 DBConn::DBConn(DBConnImp * imp) [explicit]

Constructor.

Parameters

imp Pointer to database implementation object.

9.9.2.2 gldb::DBConn::DBConn (const DBConn &)

Deleted copy constructor

9.9.2.3 gldb::DBConn::DBConn (const DBConn &&)

Deleted move constructor

9.9.3 Member Function Documentation

9.9.3.1 unsigned long long DBConn::last_auto_increment ()

Returns the last auto incremented value.

Returns

The last auto incremented value.

9.9.3.2 DBConn& gldb::DBConn::operator= (const DBConn &)

Deleted copy assignment operator

9.9.3.3 DBConn& gldb::DBConn::operator= (const DBConn &&)

Deleted move assignment operator

9.9.3.4 void DBConn::query (const std::string & sql_query)

Runs an SQL query.

Parameters

sql_query The query.

Returns

A Table object containing the results.

9.9.3.5 Table DBConn::select (const std::string & query)

Runs an SQL SELECT query.

Parameters

query	The query.	

Returns

A Table object containing the results.

9.9.4 Member Data Documentation

9.9.4.1 DBConnImp*gldb::DBConn::m_imp [private]

Pointer to database implementation object.

Collaboration diagram for gldb::DBConnCouldNotConnect:

Public Member Functions

• DBConnCouldNotConnect (const std::string &msg)

Constructor.

9.10.1 Detailed Description

Could not connect to database exception class.

9.10.2 Constructor & Destructor Documentation

```
9.10.2.1 gldb::DBConnCouldNotConnect::DBConnCouldNotConnect ( const std::string & msg ) [inline], [explicit]
```

Constructor.

Parameters

msq	Database error message	
-----	------------------------	--

The documentation for this class was generated from the following file:

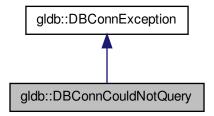

• lib/database/dbconn.h

9.11 gldb::DBConnCouldNotQuery Class Reference

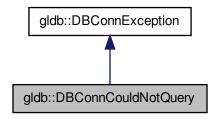

Could not execute database query exception class.

```
#include <dbconn.h>
```

Inheritance diagram for gldb::DBConnCouldNotQuery:

Collaboration diagram for gldb::DBConnCouldNotQuery:

Public Member Functions

DBConnCouldNotQuery (const std::string &msg)
 Constructor.

9.11.1 Detailed Description

Could not execute database query exception class.

9.11.2 Constructor & Destructor Documentation

9.11.2.1 gldb::DBConnCouldNotQuery::DBConnCouldNotQuery (const std::string & msg) [inline], [explicit]

Constructor.

Parameters

msg Database error message

The documentation for this class was generated from the following file:

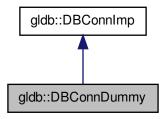

• lib/database/dbconn.h

9.12 gldb::DBConnDummy Class Reference

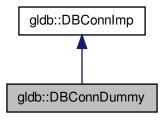

Dummy database implementation class.

#include <dbconn_dummy_imp.h>

Inheritance diagram for gldb::DBConnDummy:

Collaboration diagram for gldb::DBConnDummy:

Public Member Functions

• DBConnDummy (const std::string database, const std::string hostname, const std::string username, const std::string password)

Constructor.

- DBConnDummy (const DBConnDummy &)
- virtual ~DBConnDummy ()
- DBConnDummy & operator= (const DBConnDummy &)
- virtual void query (const std::string &sql_query)

Runs an SQL query.

• Table select (const std::string &query)

Fakes running of an SQL SELECT query.

9.12.1 Detailed Description

Dummy database implementation class.

9.12.2 Constructor & Destructor Documentation

9.12.2.1 DBConnDummy::DBConnDummy (const std::string *database*, const std::string *hostname*, const std::string *username*, const std::string *password*)

Constructor.

Parameters

database	The name of the Dummy database.
hostname	The hostname of the server.
username	The username to log into the database.
password	The password to log into the database.

9.12.2.2 gldb::DBConnDummy::DBConnDummy (const DBConnDummy &)

Deleted copy constructor

9.12.2.3 DBConnDummy::~DBConnDummy() [virtual]

Destructor

9.12.3 Member Function Documentation

9.12.3.1 DBConnDummy& gldb::DBConnDummy::operator= (const DBConnDummy &)

Deleted assignment operator

9.12.3.2 void DBConnDummy::query (const std::string & sql_query) [virtual]

Runs an SQL query.

Parameters

sql_query	The query.

Exceptions

DBConnCouldNotQuery If could not successfully execute query.

Implements gldb::DBConnImp.

9.12.3.3 Table DBConnDummy::select (const std::string & query) [virtual]

Fakes running of an SQL SELECT query.

Parameters

query	Any query.

Returns

A Table object containing dummy results.

Implements gldb::DBConnImp.

The documentation for this class was generated from the following files:

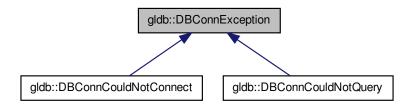

- lib/database_imp/dummy/dbconn_dummy_imp.h
- lib/database_imp/dummy/dbconn_dummy_imp.cpp

9.13 gldb::DBConnException Class Reference

Base database connection exception class.

#include <dbconn.h>

Inheritance diagram for gldb::DBConnException:

Public Member Functions

DBConnException (const std::string &msg)
 Constructor.

9.13.1 Detailed Description

Base database connection exception class.

9.13.2 Constructor & Destructor Documentation

9.13.2.1 gldb::DBConnException::DBConnException (const std::string & msg) [inline], [explicit]

Constructor.

Parameters

msg	Database error message

The documentation for this class was generated from the following file:

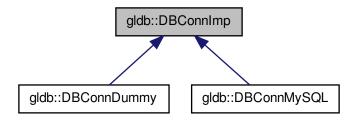

• lib/database/dbconn.h

9.14 gldb::DBConnImp Class Reference

Abstract database implementation base class.

#include <dbconnimp.h>

Inheritance diagram for gldb::DBConnImp:

Public Member Functions

- DBConnImp ()
- virtual ~DBConnImp ()
- virtual void query (const std::string &sql_query)=0

Runs an SQL query.

virtual Table select (const std::string &query)=0

Runs an SQL SELECT query.

• virtual void begin_transaction ()=0

Begins a transaction.

• virtual void rollback_transaction ()=0

Rolls back a transaction.

• virtual void commit_transaction ()=0

Commits a transaction.

virtual unsigned long long last_auto_increment ()=0

Returns the last auto incremented value.

9.14.1 Detailed Description

Abstract database implementation base class.

9.14.2 Constructor & Destructor Documentation

9.14.2.1 gldb::DBConnlmp::DBConnlmp() [inline]

Constructor

9.14.2.2 virtual gldb::DBConnlmp::~DBConnlmp() [inline], [virtual]

Destructor

9.14.3 Member Function Documentation

9.14.3.1 virtual unsigned long long gldb::DBConnlmp::last_auto_increment() [pure virtual]

Returns the last auto incremented value.

Returns

The last auto incremented value.

Implemented in gldb::DBConnMySQL.

9.14.3.2 virtual void gldb::DBConnlmp::query (const std::string & sql_query) [pure virtual]

Runs an SQL query.

Parameters

```
sql_query The query.
```

Implemented in gldb::DBConnMySQL, and gldb::DBConnDummy.

9.14.3.3 virtual Table gldb::DBConnImp::select (const std::string & query) [pure virtual]

Runs an SQL SELECT query.

Parameters

query The query.

Returns

A Table object containing the results.

Implemented in gldb::DBConnMySQL, and gldb::DBConnDummy.

The documentation for this class was generated from the following file:

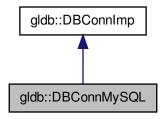

· lib/database/dbconnimp.h

9.15 gldb::DBConnMySQL Class Reference

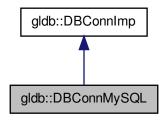

MySQL database implementation class.

#include <dbconn_mysql_imp.h>

Inheritance diagram for gldb::DBConnMySQL:

Collaboration diagram for gldb::DBConnMySQL:

Public Member Functions

DBConnMySQL (const std::string &database, const std::string &hostname, const std::string &username, const std::string &password)

Constructor.

- DBConnMySQL (const DBConnMySQL &)
- DBConnMySQL (const DBConnMySQL &&)
- virtual ~DBConnMySQL ()
- DBConnMySQL & operator= (const DBConnMySQL &)
- DBConnMySQL & operator= (const DBConnMySQL &&)
- virtual void query (const std::string &sql_query)

Runs an SQL query.

virtual Table select (const std::string &sql_query)

Runs an SQL SELECT query.

• virtual void begin_transaction ()

Begins a transaction.

• virtual void rollback_transaction ()

Rolls back a transaction.

• virtual void commit_transaction ()

Commits a transaction.

virtual unsigned long long last_auto_increment ()

Returns the last auto incremented value.

Private Attributes

MYSQL * m conn

Static Private Attributes

static std::mutex mtx

9.15.1 Detailed Description

MySQL database implementation class.

9.15.2 Constructor & Destructor Documentation

9.15.2.1 DBConnMySQL::DBConnMySQL (const std::string & database, const std::string & hostname, const std::string & username, const std::string & password)

Constructor.

Parameters

database	The name of the MySQL database.
hostname	The hostname of the server.
username	The username to log into the database.
password	The password to log into the database.

Exceptions

DBConnCouldNotConnect	If could not connect to database.

9.15.2.2 gldb::DBConnMySQL::DBConnMySQL (const DBConnMySQL &)

Deleted copy constructor

9.15.2.3 gldb::DBConnMySQL::DBConnMySQL (const DBConnMySQL &&)

Delete move constructor

9.15.2.4 virtual gldb::DBConnMySQL::~DBConnMySQL() [virtual]

Destructor

9.15.3 Member Function Documentation

9.15.3.1 virtual unsigned long long gldb::DBConnMySQL::last_auto_increment() [virtual]

Returns the last auto incremented value.

Returns

The last auto incremented value.

Implements gldb::DBConnImp.

9.15.3.2 DBConnMySQL& gldb::DBConnMySQL::operator= (const DBConnMySQL &)

Deleted assignment operator

9.15.3.3 DBConnMySQL& gldb::DBConnMySQL::operator= (const DBConnMySQL &&)

Deleted move assignment operator

9.15.3.4 virtual void gldb::DBConnMySQL::query (const std::string & sql_query) [virtual]

Runs an SQL query.

Parameters

```
sql_query The SQL query.
```

Exceptions

DBConnCouldNotQuery | If could not successfully execute query.

Implements gldb::DBConnImp.

9.15.3.5 virtual Table gldb::DBConnMySQL::select (const std::string & sql_query) [virtual]

Runs an SQL SELECT query.

Parameters

```
sql_query The SQL query.
```

Returns

A Table object containing the results.

Exceptions

DBConnCouldNotQuery If could not successfully execute query.

Implements gldb::DBConnImp.

9.15.4 Member Data Documentation

9.15.4.1 MYSQL* gldb::DBConnMySQL::m_conn [private]

The initialized MySQL handle.

9.15.4.2 std::mutex DBConnMySQL::mtx [static], [private]

Database connection mutex

9.18 genleg::DBSQLStatements Class Reference

SQL statements class.

#include <dbsqlstatements.h>

Inheritance diagram for genleg::DBSQLStatements:

Public Member Functions

- DBSQLStatements ()
- virtual ~DBSQLStatements ()
- virtual std::string create table (const std::string &table name) const

Returns a SQL statement for creating a table.

• virtual std::string drop_table (const std::string &table_name) const

Returns a SQL statement for dropping a table.

• virtual std::string create_view (const std::string &view_name) const

Returns a SQL statement for creating a view.

virtual std::string drop_view (const std::string &view_name) const

Returns a SQL statement for dropping a view.

virtual std::string user_by_id (const std::string &user_id) const

Returns a SQL statement to select a user by ID.

virtual std::string user_by_username (const std::string &user_name) const

Returns a SQL statement to select a user by username.

• virtual std::string update_user (const GLUser &user) const

Returns a SQL UPDATE statement to update a user.

virtual std::string entity_by_id (const std::string &entity_id) const

Returns a SQL statement to select an entity by ID.

• virtual std::string entity_by_name (const std::string &entity_name) const

Returns a SQL statement to select an entity by short name.

virtual std::string je_by_id (const std::string &je_id) const

Returns a SQL statement to select a journal entry by ID.

virtual std::string jelines_by_id (const std::string &je_id) const

Returns a SQL statement to select journal entry lines by ID.

 virtual std::string post_je (const unsigned int user, const unsigned int entity, const int period, const int year, const std::string &source, const std::string &memo) const

Returns a SQL INSERT statement to post a journal entry.

virtual std::string post_je_line (const unsigned long long je, const std::string account, const std::string amount)

Returns a SQL INSERT query to post a journal entry line.

virtual std::string grant (const std::string &user_id, const std::string &perm) const

Returns a SQL statement to grant a user a permission.

virtual std::string revoke (const std::string &user_id, const std::string &perm) const

Returns a SQL UPDATE statement to revoke a permission from a user.

virtual std::string get_perms (const std::string &user_id) const

Returns a SQL UPDATE statement to list a user's permissions.

• virtual std::string currenttb () const

Returns a SQL statement to run the current trial balance report.

• virtual std::string currenttb_by_entity (const std::string &entity) const

Returns a SQL statement to run the current trial balance report by entity.

• std::string listusers () const

Returns a SQL statement to run the list users report.

9.18.1 Detailed Description

SQL statements class.

9.18.2 Constructor & Destructor Documentation

9.18.2.1 DBSQLStatements::DBSQLStatements ()

Constructor

9.18.2.2 DBSQLStatements::~DBSQLStatements() [virtual]

Destructor

9.18.3 Member Function Documentation

9.18.3.1 std::string DBSQLStatements::create_table (const std::string & table_name) const [virtual]

Returns a SQL statement for creating a table.

Parameters

table name The table to create.

Returns

The SQL statement to create the table.

9.18.3.2 std::string DBSQLStatements::create_view (const std::string & view_name) const [virtual]

Returns a SQL statement for creating a view.

Parameters

view_name The view to create.

Returns

The SQL statement to create the view.

9.18.3.3 std::string DBSQLStatements::currenttb() const [virtual]

Returns a SQL statement to run the current trial balance report.

Returns

The SQL statement.

9.18.3.4 std::string DBSQLStatements::currenttb_by_entity (const std::string & entity) const [virtual]

Returns a SQL statement to run the current trial balance report by entity.

Parameters

entity The entity number for which to run the report.

Returns

The SQL statement.

9.18.3.5 std::string DBSQLStatements::drop_table (const std::string & table_name) const [virtual]

Returns a SQL statement for dropping a table.

Parameters

table name	The table to drop.
lable_Hairie	The lable to drop.
	·

Returns

The SQL statement to drop the table.

9.18.3.6 std::string DBSQLStatements::drop_view (const std::string & view_name) const [virtual]

Returns a SQL statement for dropping a view.

Parameters

view_name	The view to drop.

Returns

The SQL statement to drop the view.

9.18.3.7 std::string DBSQLStatements::entity_by_id (const std::string & entity_id) const [virtual]

Returns a SQL statement to select an entity by ID.

|--|

Returns

The SQL statement.

9.18.3.8 std::string DBSQLStatements::entity_by_name (const std::string & entity_name) const [virtual]

Returns a SQL statement to select an entity by short name.

Parameters

entity name	The entity short name.	
	1	

Returns

The SQL statement.

9.18.3.9 std::string DBSQLStatements::get_perms (const std::string & user_id) const [virtual]

Returns a SQL UPDATE statement to list a user's permissions.

Parameters

user_id	The user ID for which to list.
---------	--------------------------------

Returns

The SQL statement.

9.18.3.10 std::string DBSQLStatements::grant (const std::string & user_id, const std::string & perm) const [virtual]

Returns a SQL statement to grant a user a permission.

Attention

This function always sets the user granting the permission to user 1. This will need to be updated to support the recording of which user has granted the permission, when support for others to be able to do so is implemented.

Parameters

user_id	The user ID for which to grant the permission.
perm	A string containing the name of the permission.

Returns

The SQL statement.

9.18.3.11 std::string DBSQLStatements::je_by_id (const std::string & je_id) const [virtual]

Returns a SQL statement to select a journal entry by ID.

je_id	The journal entry ID.

Returns

The SQL statement.

9.18.3.12 std::string DBSQLStatements::jelines_by_id (const std::string & je_id) const [virtual]

Returns a SQL statement to select journal entry lines by ID.

Parameters

je_id	The journal entry ID.

Returns

The SQL statement.

9.18.3.13 std::string DBSQLStatements::listusers () const

Returns a SQL statement to run the list users report.

Returns

The SQL statement.

9.18.3.14 std::string DBSQLStatements::post_je (const unsigned int *user*, const unsigned int *entity*, const int *period*, const int *year*, const std::string & *source*, const std::string & *memo*) const [virtual]

Returns a SQL INSERT statement to post a journal entry.

Parameters

user	The ID of the posting user.	
entity	The entity ID.	
period	The accounting period.	
year	The accounting year.	
source	The journal entry source.	
memo	The memo for the journal entry.	

Returns

A string containing the query.

9.18.3.15 std::string DBSQLStatements::post_je_line (const unsigned long je, const std::string account, const std::string amount) const [virtual]

Returns a SQL INSERT query to post a journal entry line.

je	The journal entry ID.
account	The account to which to post.
amount	The amount to post.

Returns

A string containing the SQL statement.

9.18.3.16 std::string DBSQLStatements::revoke (const std::string & user_id, const std::string & perm) const [virtual]

Returns a SQL UPDATE statement to revoke a permission from a user.

Parameters

user_id	The user ID from which to revoke.
perm	The permission to revoke.

Returns

The SQL statement.

9.18.3.17 std::string DBSQLStatements::update_user(const GLUser & user) const [virtual]

Returns a SQL UPDATE statement to update a user.

Parameters

user	A user object.

Returns

The SQL statement.

9.18.3.18 std::string DBSQLStatements::user_by_id (const std::string & user_id) const [virtual]

Returns a SQL statement to select a user by ID.

Parameters

user_id	The user_id

Returns

The SQL statement.

9.18.3.19 std::string DBSQLStatements::user_by_username(const std::string & user_name) const [virtual]

Returns a SQL statement to select a user by username.

Parameters

user_name	The username.

Returns

The SQL statement.

The documentation for this class was generated from the following files:

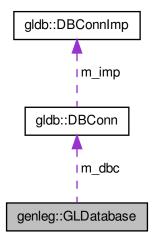

- · lib/dbsql/dbsqlstatements.h
- lib/dbsql/dbsqlstatements.cpp

9.19 genleg::GLDatabase Class Reference

General ledger database class.

#include <gldatabase.h>

Collaboration diagram for genleg::GLDatabase:

Public Member Functions

• GLDatabase (const std::string &database, const std::string &hostname, const std::string &username, const std::string &password)

Constructor.

- ∼GLDatabase ()
- void create_structure ()

Creates the database structure.

• void destroy_structure ()

Destroys the database structure.

void load_sample_data (const std::string &dir)

Loads sample data into the database.

• GLUser get_user_by_id (const std::string &user_id)

Returns a user from an ID.

• GLUser get_user_by_username (const std::string &user_name)

Returns a user from a user name.

void update_user (const GLUser &user)

Updates a user's details.

void grant (const GLUser &user, const std::string &perm)

Grants a user a permission.

void revoke (const GLUser &user, const std::string &perm)

Revokes a permission from a user.

GLEntity get_entity_by_id (const std::string &entity_id)

Returns an entity from an ID.

• GLEntity get_entity_by_name (const std::string &entity_name)

Returns an entity from an entity short name.

• GLJournal get_je_by_id (const std::string &je_id)

Returns a journal entry from an ID.

void post_journal (const GLJournal &journal)

Posts a journal entry.

• GLReport report (const std::string &report_name, const std::string &arg="")

Runs a report.

Static Public Member Functions

· static std::string backend ()

Returns the backend database implementation.

Private Member Functions

• GLUser create user (gldb::Table &table)

Creates a user from a query table.

• GLEntity create_entity (gldb::Table &table)

Creates an entity from a query table.

GLReport current trial balance report (const std::string &entity)

Returns a current trial balance report.

• GLReport list_users_report ()

Returns a list users report.

GLReport je_report (const std::string &je_id)

Returns a single journal entry report.

Private Attributes

- gldb::DBConn m_dbc
- const std::shared_ptr< const DBSQLStatements > m_sql
- const std::vector< std::string > m tables
- const std::vector< std::string > m_views

9.19.1 Detailed Description

General ledger database class.

9.19.2 Constructor & Destructor Documentation

9.19.2.1 GLDatabase::GLDatabase (const std::string & database, const std::string & hostname, const std::string & username, const std::string & password)

Constructor.

Parameters

database	Database name.
hostname	Hostname of database machine.
username	Username to log into database.
password	Password to log into database.

Exceptions

GLDBException	on error.

9.19.2.2 GLDatabase::~GLDatabase()

Destructor

9.19.3 Member Function Documentation

9.19.3.1 std::string GLDatabase::backend() [static]

Returns the backend database implementation.

This may be called to discover which database platform support has been compiled into the application.

Returns

A string containing the database platform name.

9.19.3.2 GLEntity GLDatabase::create_entity (gldb::Table & table) [private]

Creates an entity from a query table.

Provided because the public functions can get a entity either from an ID or a name, this function contains the common functionality.

Parameters

table	A table from the appropriate query.

Returns

The new entity.

9.19.3.3 void GLDatabase::create_structure ()

Creates the database structure.

Exceptions

GLDBException on error.

9.19.3.4 GLUser GLDatabase::create_user(gldb::Table & table) [private]

Creates a user from a query table.

Provided because the public functions can get a user either from an ID or a name, this function contains the common functionality.

Parameters

table A table from the appropriate query.

Returns

The new user.

9.19.3.5 GLReport GLDatabase::current_trial_balance_report (const std::string & entity) [private]

Returns a current trial balance report.

Parameters

entity The entity for which to run the report, or an empty string for all entities.

Returns

A GLReport object with the report.

9.19.3.6 void GLDatabase::destroy_structure ()

Destroys the database structure.

Exceptions

GLDBException on error.

9.19.3.7 GLEntity GLDatabase::get_entity_by_id (const std::string & entity_id)

Returns an entity from an ID.

Parameters

entity_id The entity ID.

Returns

The entity.

Exceptions

GLDBException | if the entity cannot be found.

9.19.3.8 GLEntity GLDatabase::get_entity_by_name (const std::string & entity_name)

Returns an entity from an entity short name.

76	Class I	Documentatio	١c
----	---------	--------------	----

_					
D۵	ro	m	Δi	0	rc

entity_name The entity short name.

Returns

The entity.

Exceptions

GLDBException if the user cannot be found.

9.19.3.9 GLJournal GLDatabase::get_je_by_id (const std::string & je_id)

Returns a journal entry from an ID.

Parameters

je_id The journal entry ID.

Returns

The entity.

9.19.3.10 GLUser GLDatabase::get_user_by_id (const std::string & user_id)

Returns a user from an ID.

Parameters

user_id The user ID.

Returns

The user.

Exceptions

GLDBException if the user cannot be found.

9.19.3.11 GLUser GLDatabase::get_user_by_username (const std::string & user_name)

Returns a user from a user name.

Parameters

user_name	The user name.

Returns

The user.

Exceptions

GLDBException if the user cannot be found.

9.19.3.12 void GLDatabase::grant (const GLUser & user, const std::string & perm)

Grants a user a permission.

Parameters

user	The user for which to grant.
perm	A string containing the permission to grant.

9.19.3.13 GLReport GLDatabase::je_report (const std::string & je_id) [private]

Returns a single journal entry report.

Returns

A GLReport object with the report.

9.19.3.14 GLReport GLDatabase::list_users_report() [private]

Returns a list users report.

Returns

A GLReport object with the report.

9.19.3.15 void GLDatabase::load_sample_data (const std::string & dir)

Loads sample data into the database.

Parameters

dir	The directory containing the sample data. Individual files in that directory should be named
	after the table they are intended to poplate.

Exceptions

GLDBException on error.

9.19.3.16 void GLDatabase::post_journal (const GLJournal & journal)

Posts a journal entry.

journal	The journal entry to post.

9.19.3.17 GLReport GLDatabase::report (const std::string & report_name, const std::string & arg = " ")

Runs a report.

Parameters

report_name	The name of the report.
arg	An optional argument.

Returns

A report object.

9.19.3.18 void GLDatabase::revoke (const GLUser & user, const std::string & perm)

Revokes a permission from a user.

Parameters

user	The user for which to revoke.
perm	A string containing the permission to revoke.

9.19.3.19 void GLDatabase::update_user (const GLUser & user)

Updates a user's details.

Parameters

user	The user object.
	-

Collaboration diagram for genleg::GLEntity:

Public Member Functions

• GLEntity (const size_t id, const std::string &name, const std::string &shortname, const size_t parent, const bool aggregate, const bool enabled)

Constructor.

Public Attributes

- std::string m_name
- std::string m_shortname
- const size_t m_parent

- · const bool m_aggregate
- bool m_enabled

9.22.1 Detailed Description

General ledger entity class.

9.22.2 Constructor & Destructor Documentation

9.22.2.1 genleg::GLEntity::GLEntity (const size_t id, const std::string & name, const std::string & shortname, const size_t parent, const bool aggregate, const bool enabled) [inline]

Constructor.

Parameters

id	Entity ID.
name	Entity name.
shortname	Entity short name.
parent	Parent entity ID.
aggregate	Aggregate entity flag.
enabled	Enabled flag.

9.22.3 Member Data Documentation

9.22.3.1 const bool genleg::GLEntity::m_aggregate

Aggregate entity flag

9.22.3.2 bool genleg::GLEntity::m_enabled

Enabled flag

9.22.3.3 std::string genleg::GLEntity::m_name

Entity name

9.22.3.4 const size_t genleg::GLEntity::m_parent

Parent entity ID

9.22.3.5 std::string genleg::GLEntity::m_shortname

Entity short name

The documentation for this class was generated from the following file:

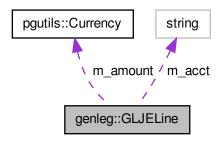

• lib/gldb/glentity.h

9.23 genleg::GLJELine Class Reference

Journal entry line class.

#include <gljournal.h>

Collaboration diagram for genleg::GLJELine:

Public Member Functions

- GLJELine (const std::string account, const pgutils::Currency &amount)
 - Constructor.
- std::string account () const

Returns the account name/number.

• pgutils::Currency amount () const

Returns the currency amount.

Private Attributes

- std::string m_acct
- pgutils::Currency m_amount

9.23.1 Detailed Description

Journal entry line class.

9.23.2 Constructor & Destructor Documentation

9.23.2.1 genleg::GLJELine:GLJELine (const std::string account, const pgutils::Currency & amount) [inline]

Constructor.

Parameters

account	The account name/ID
amount	The currency amount

9.23.3 Member Function Documentation

9.23.3.1 std::string genleg::GLJELine::account() const [inline]

Returns the account name/number.

Returns

The account name/number.

9.23.3.2 pgutils::Currency genleg::GLJELine::amount() const [inline]

Returns the currency amount.

Returns

The currency amount.

9.23.4 Member Data Documentation

9.23.4.1 std::string genleg::GLJELine::m_acct [private]

Account number/name

9.23.4.2 pgutils::Currency genleg::GLJELine::m_amount [private]

Amount

The documentation for this class was generated from the following file:

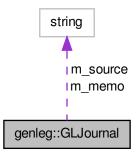

• lib/gldb/gljournal.h

9.24 genleg::GLJournal Class Reference

Journal entry class.

#include <gljournal.h>

Collaboration diagram for genleg::GLJournal:

Public Member Functions

• GLJournal (const unsigned long entity, const int period, const int year, const std::string &source, const std::string &memo, const size_t id=0, const size_t user=0)

Constructor.

• iterator begin ()

Returns an iterator to the first line.

• iterator end ()

Returns an iterator to one past the last line.

• const_iterator begin () const

Returns a const iterator to the first line.

• const_iterator end () const

Returns a const iterator to one past the last line.

Private Attributes

- unsigned long m_entity
- int m_period
- int m_year
- std::string m_source
- std::string m_memo
- size t m id
- size_t m_user
- $std::vector < GLJELine > m_lines$

9.24.1 Detailed Description

Journal entry class.

9.24.2 Constructor & Destructor Documentation

9.24.2.1 genleg::GLJournal::GLJournal (const unsigned long *entity*, const int *period*, const int *year*, const std::string & source, const std::string & memo, const size_t id = 0, const size_t user = 0) [inline]

Constructor.

Parameters

entity	The entity number.
period	The accounting period.
year	The accounting year.
source	The journal entry source.
memo	A memo for the journal entry.
id	The journal entry ID.
user	The posting user ID.

9.24.3 Member Function Documentation

9.24.3.1 iterator genleg::GLJournal::begin() [inline]

Returns an iterator to the first line.

```
Returns
```

An iterator to the first line.

```
9.24.3.2 const_iterator genleg::GLJournal::begin ( ) const [inline]
```

Returns a const iterator to the first line.

Returns

A const iterator to the first line.

```
9.24.3.3 iterator genleg::GLJournal::end() [inline]
```

Returns an iterator to one past the last line.

Returns

An iterator to one past the last line.

```
9.24.3.4 const_iterator genleg::GLJournal::end ( ) const [inline]
```

Returns a const iterator to one past the last line.

Returns

A const iterator to one past the last line.

9.24.4 Member Data Documentation

```
9.24.4.1 unsigned long genleg::GLJournal::m_entity [private]
```

The entity number for the journal entry.

```
9.24.4.2 size_t genleg::GLJournal::m_id [private]
```

The journal entry ID

```
9.24.4.3 std::vector<GLJELine> genleg::GLJournal::m_lines [private]
```

A vector of journal entry lines.

```
9.24.4.4 std::string genleg::GLJournal::m_memo [private]
```

The memo for the journal entry.

9.24.4.5 int genleg::GLJournal::m_period [private]

The accounting period.

```
9.24.4.6 std::string genleg::GLJournal::m_source [private]
```

The journal entry source.

```
9.24.4.7 size_t genleg::GLJournal::m_user [private]
```

The journal entry posting user ID

```
9.24.4.8 int genleg::GLJournal::m_year [private]
```

The accounting year.

• lib/gldb/gljournal.h

9.25 genleg::GLReport Class Reference

General ledger report class.

```
#include <glreport.h>
```

Public Member Functions

• GLReport (const std::string &title, const std::string &report)

Private Attributes

```
• const std::string m_title
```

```
• std::vector< std::pair
```

```
< std::string, std::string > > m_headers
```

• const std::string m_report_text

9.25.1 Detailed Description

General ledger report class.

9.25.2 Constructor & Destructor Documentation

```
9.25.2.1 genleg::GLReport::GLReport ( const std::string & title, const std::string & report ) [inline]
```

Constructor

9.25.3 Member Data Documentation

```
9.25.3.1 std::vector<std::pair<std::string, std::string>> genleg::GLReport::m_headers [private]
```

Report headers

9.25.3.2 const std::string genleg::GLReport::m_report_text [private]

The main report text

9.25.3.3 const std::string genleg::GLReport::m_title [private]

The report title

9.26 genleg::GLUser Class Reference

General ledger user class.

```
#include <gluser.h>
```

Collaboration diagram for genleg::GLUser:

Public Member Functions

GLUser (const std::string &id, const std::string &username, const std::string &firstname, const std::string &lastname, const std::string &pass_hash, const std::string &pass_salt, std::vector< std::string > &&perms, const bool enabled)

Constructor.

- ∼GLUser ()
- const std::string & id () const

Returns the user ID.

• const std::string & username () const

Returns the username.

· const std::string & firstname () const

Returns the user's first name.

• const std::string & lastname () const

Returns the user's last name.

• const std::string & pass_hash () const

Returns the user's hashed password.

• const std::string & pass_salt () const

Returns the user's password salt.

• const std::vector< std::string > & permissions () const

Returns the permissions for a user.

· bool enabled () const

Returns the user's enabled status.

void set_username (const std::string &new_username)

Sets a user's username.

void set_firstname (const std::string &new_firstname)

Sets a user's first name.

void set lastname (const std::string &new lastname)

Sets a user's last name.

void set_enabled (const bool new_enabled)

Sets a user's enabled status.

void set_password (const std::string &new_pass)

Sets a user's password hash and salt.

bool check_password (const std::string &check_pass)

Checks a password against the user's hash.

Private Attributes

- · const std::string m_id
- std::string m_username
- std::string m_firstname
- std::string m_lastname
- std::string m_pass_hash
- std::string m_pass_salt
- const std::vector< std::string > m_perms
- bool m_enabled

9.26.1 Detailed Description

General ledger user class.

9.26.2 Constructor & Destructor Documentation

9.26.2.1 GLUser::GLUser (const std::string & id, const std::string & username, const std::string & firstname, const std::string & pass_hash, const std::string & pass_salt, std::vector < std::string > && perms, const bool enabled)

Constructor.

id	User ID
username	Username
firstname	First name
lastname	Last name
pass_hash	The hashed password
pass_salt	The salt for the hashed password
	Vector of user permissions
Generated on Sun Jun 22	2014-18:48:iP USEP 198 면서선 1997 198일 otherwise.

```
9.26.2.2 GLUser:: ∼GLUser ( )
```

Destructor

9.26.3 Member Function Documentation

9.26.3.1 bool GLUser::check_password (const std::string & check_pass)

Checks a password against the user's hash.

Parameters

Returns

true is the password matches, false otherwise.

9.26.3.2 bool GLUser::enabled () const

Returns the user's enabled status.

Returns

The user's enabled status.

9.26.3.3 const std::string & GLUser::firstname () const

Returns the user's first name.

Returns

The user's first name.

9.26.3.4 const std::string & GLUser::id () const

Returns the user ID.

Returns

The user ID.

9.26.3.5 const std::string & GLUser::lastname () const

Returns the user's last name.

Returns

The user's last name.

9.26.3.6 const std::string & GLUser::pass_hash () const

Returns the user's hashed password.

Returns

The user's hashed password.

9.26.3.7 const std::string & GLUser::pass_salt () const

Returns the user's password salt.

Returns

The user's password salt.

9.26.3.8 const std::vector < std::string > & GLUser::permissions ($\,$) const

Returns the permissions for a user.

Returns

A vector of strings containing the names of the permissions held by the user.

9.26.3.9 void GLUser::set_enabled (const bool new_enabled)

Sets a user's enabled status.

Parameters

new_enabled	The user's new enabled status.

9.26.3.10 void GLUser::set_firstname (const std::string & new_firstname)

Sets a user's first name.

Parameters

new_firstname The user's new first name.

9.26.3.11 void GLUser::set_lastname (const std::string & new_lastname)

Sets a user's last name.

Parameters

new_lastname	The user's new last name.

9.26.3.12 void GLUser::set_password (const std::string & new_pass)

Sets a user's password hash and salt.

Parameters

new pass The new password, must be > 8 characters.	
--	--

9.26.3.13 void GLUser::set_username (const std::string & new_username)

Sets a user's username.

Parameters

new_username	The user's new username.

9.26.3.14 const std::string & GLUser::username () const

Returns the username.

Returns

The username.

9.26.4 Member Data Documentation

9.26.4.1 bool genleg::GLUser::m_enabled [private]

User's enabled status

9.26.4.2 std::string genleg::GLUser::m_firstname [private]

User's first name

9.26.4.3 const std::string genleg::GLUser::m_id [private]

User ID

9.26.4.4 std::string genleg::GLUser::m_lastname [private]

User's last name

9.26.4.5 std::string genleg::GLUser::m_pass_hash [private]

User's hashed password

9.26.4.6 std::string genleg::GLUser::m_pass_salt [private]

User's password salt

9.26.4.7 const std::vector<std::string> genleg::GLUser::m_perms [private]

List of permissions

9.26.4.8 std::string genleg::GLUser::m_username [private]

Username

9.27 gldb::MySQLResult Class Reference

MySQL result structure class.

```
#include <dbconn_mysql_result.h>
```

Public Member Functions

• MySQLResult (MYSQL *conn)

Constructor.

- ∼MySQLResult ()
- MySQLResult (const MySQLResult &result)
- MySQLResult (MySQLResult &&result)
- MySQLResult & operator= (const MySQLResult &result)
- MySQLResult & operator= (MySQLResult &&result)
- MYSQL_RES * result ()

Returns the MYSQL_RES pointer.

• unsigned int num_fields () const

Returns the number of fields in the result set.

Private Attributes

- MYSQL_RES * m_result
- unsigned int m_num_fields

9.27.1 Detailed Description

MySQL result structure class.

9.27.2 Constructor & Destructor Documentation

```
9.27.2.1 MySQLResult::MySQLResult(MYSQL*conn) [explicit]
```

Constructor.

Parameters

```
conn | MySQL connection
```

Exceptions

DBConnCouldNotQuery	on failure

```
9.27.2.2 gldb::MySQLResult::~MySQLResult()
Destructor
9.27.2.3 gldb::MySQLResult::MySQLResult ( const MySQLResult & result )
Deleted copy constructor
9.27.2.4 gldb::MySQLResult::MySQLResult ( MySQLResult && result )
Deleted move constructor
9.27.3 Member Function Documentation
9.27.3.1 unsigned int gldb::MySQLResult::num_fields( ) const [inline]
Returns the number of fields in the result set.
Returns
    The number of fields in the result set.
9.27.3.2 MySQLResult& gldb::MySQLResult::operator= ( const MySQLResult & result )
Deleted copy assignment operator
9.27.3.3 MySQLResult& gldb::MySQLResult::operator= ( MySQLResult && result )
Deleted move assignment operator
9.27.3.4 MYSQL_RES* gldb::MySQLResult::result( ) [inline]
Returns the MYSQL_RES pointer.
Returns
    The MYSQL_RES pointer.
9.27.4 Member Data Documentation
9.27.4.1 unsigned int gldb::MySQLResult::m_num_fields [private]
The number of fields in the result set
9.27.4.2 MYSQL_RES* gldb::MySQLResult::m_result [private]
The MYSQL_RES pointer
```

9.28 gldb::Table Class Reference

Database table class.

#include <table.h>

Collaboration diagram for gldb::Table:

Public Member Functions

• Table (const TableRow &headers)

Constructor.

• Table (TableRow &&headers)

Constructor with move semantics.

• Table (const Table &table)

Copy constructor.

• Table (Table &&table)

Move constructor.

• Table & operator= (const Table &table)

Copy assignment operator.

Table & operator= (Table &&table)

Move assignment operator.

- \sim Table ()
- size_t num_fields () const

Returns the number of fields in each row.

• size_t num_records () const

Returns the number of record in the table.

• iterator begin ()

Returns iterator for beginning.

• iterator end ()

Returns iterator for end plus one.

• const_iterator begin () const

Returns const iterator for beginning.

· const_iterator end () const

Returns const iterator for end plus one.

void set quoted (const std::vector< bool > &vec)

Sets the quote flags for the records.

void set_quoted (std::vector< bool > &&vec)

Sets the quote flags for the records with move semantics.

const TableRow & get_headers () const

Returns the field names.

const TableRow & operator[] (const size_t idx) const

Overloaded index operator.

void append_record (const TableRow &new_record)

Appends a record to the table.

void append_record (TableRow &&new_record)

Appends a record to the table with move semantics.

• std::string insert_query (const std::string &table_name, const size_t idx)

Creates an SQL INSERT query from a table record.

std::string get_field (const std::string &field_name, const size_t row_index)

Gets a field from a record by field name.

Static Public Member Functions

• static Table create_from_file (const std::string &filename, const char delim)

Creates a table from an input file.

Private Attributes

- · TableRow m headers
- std::vector< TableRow > m_records
- std::vector< bool > m_quoted

9.28.1 Detailed Description

Database table class.

9.28.2 Constructor & Destructor Documentation

9.28.2.1 Table::Table (const TableRow & headers) [explicit]

Constructor.

Parameters

headers | Table row containing field names.

9.28.2.2 Table::Table (TableRow && headers) [explicit]

Constructor with move semantics.

Parameters

headers Table row containing field names.

9.28.2.3 Table::Table (const Table & table)

Copy constructor.

Bug 'explicit' removed from here after failure to compile at end of MySQL query function.

Parameters

```
table Table to copy.
```

9.28.2.4 Table::Table (Table && table)

Move constructor.

Parameters

table Table to move.

9.28.2.5 Table::∼Table ()

Destructor

9.28.3 Member Function Documentation

9.28.3.1 void Table::append_record (const TableRow & new_record)

Appends a record to the table.

Parameters

new_record	The record to append.

9.28.3.2 void Table::append_record (TableRow && new_record)

Appends a record to the table with move semantics.

Parameters

new_record The record to append.

9.28.3.3 iterator gldb::Table::begin () [inline]

Returns iterator for beginning.

Returns

Iterator for beginning.

9.28.3.4 const_iterator gldb::Table::begin () const [inline]

Returns const iterator for beginning.

Returns

Const iterator for beginning.

9.28.3.5 Table Table::create_from_file (const std::string & filename, const char delim) [static]

Creates a table from an input file.

Parameters

filename	The name of the input file.
delim	The delimiting character.

Returns

The table.

Exceptions

TableBadInputFile	on badly formed input file.
TableCouldNotOpenInput-	on bad filename.
File	

9.28.3.6 iterator gldb::Table::end() [inline]

Returns iterator for end plus one.

Returns

Iterator for end plus one.

9.28.3.7 const_iterator gldb::Table::end () const [inline]

Returns const iterator for end plus one.

Returns

Const iterator for end plus one.

9.28.3.8 std::string Table::get_field (const std::string & field_name, const size_t row_index)

Gets a field from a record by field name.

Parameters

field_name	The name of the field.
row_index	The index of the row.

Returns

The contents of the field.

Exceptions

TableNoSuchField	if field_name is not a valid field name.
TableNoSuchRecord	if there is no record at index row_index.

9.28.3.9 const TableRow& gldb::Table::get_headers () const [inline]

Returns the field names.

Returns

The field names.

9.28.3.10 std::string Table::insert_query (const std::string & table_name, const size_t idx)

Creates an SQL INSERT query from a table record.

Parameters

table_name	The name of the table into which to INSERT.
idx	The index of the record.

Returns

A string containing the query.

9.28.3.11 size_t gldb::Table::num_fields() const [inline]

Returns the number of fields in each row.

Returns

The number of fields in each row.

9.28.3.12 size_t gldb::Table::num_records() const [inline]

Returns the number of record in the table.

Returns

The number of records in the table.

9.28.3.13 Table & Table::operator= (const Table & table)

Copy assignment operator.

Parameters

table	Table to copy.

Returns

Reference to the assigned-to table.

9.28.3.14 Table & Table::operator= (Table && table)

Move assignment operator.

Parameters

table | Table to move.

Returns

Reference to the assigned-to table.

9.28.3.15 const TableRow & Table::operator[] (const size_t idx) const

Overloaded index operator.

Parameters

idx The zero-based index of the record.

Returns

The selected record.

9.28.3.16 void Table::set_quoted (const std::vector< bool > & vec)

Sets the quote flags for the records.

Parameters

vec A vector of bools. The size must match the size of the records.

9.28.3.17 void Table::set_quoted (std::vector< bool > && vec)

Sets the quote flags for the records with move semantics.

Parameters

vec A vector of bools. The size must match the size of the records.

9.28.4 Member Data Documentation

9.28.4.1 TableRow gldb::Table::m_headers [private]

The names of the fields

9.28.4.2 std::vector<bool> gldb::Table::m_quoted [private]

A vector to show if fields should be quoted for INSERT

9.28.4.3 std::vector<TableRow> gldb::Table::m_records [private]

A vector of the records

lib/database/table.h

9.32 gldb::TableField Class Reference

Database table field class.

#include <tablefield.h>

Collaboration diagram for gldb::TableField:

Public Member Functions

• TableField (const char *data)

Constructor accepting const char * data.

• TableField (const std::string &data)

Constructor accepting std:string data.

• TableField (std::string &&data)

Constructor accepting std:string data with move semantics.

TableField (const TableField &field)

Copy constructor.

• TableField (TableField &&field)

Move constructor.

- ∼TableField ()
- size_t length () const

Returns the length of the field.

· operator std::string () const

Overridden conversion operator.

• TableField & operator= (const char *data)

Overridden assignment operator for const char *.

TableField & operator= (const std::string &data)

Overridden assignment operator for std::string.

TableField & operator= (std::string &&data)

Overridden assignment operator for std::string with move semantics.

TableField & operator= (const TableField &field)

Overridden copy assignment operator.

• TableField & operator= (TableField &&field)

Overridden move assignment operator.

char & operator[] (const size_t idx)

Overridden index operator.

const char & operator[] (const size_t idx) const

Overridden index operator.

TableField & operator+= (const char c)

Overridden compound assignment operator.

TableField & operator+= (const std::string &data)

Overridden compound assignment operator.

Private Attributes

• std::string m_data

Friends

std::ostream & operator << (std::ostream &out, const TableField &field)
 Overridden << operator for printing a field.

9.32.1 Detailed Description

Database table field class.

9.32.2 Constructor & Destructor Documentation

```
9.32.2.1 TableField::TableField ( const char * data ) [explicit]
```

Constructor accepting const char * data.

Parameters

data The initial contents of the field.

9.32.2.2 TableField::TableField (const std::string & data)

Constructor accepting std:string data.

Parameters

data	The initial	contents of the field.
uaia	i i iie ii iiiiai	CONTENTS OF THE HEID.

9.32.2.3 TableField::TableField (std::string && data)

Constructor accepting std:string data with move semantics.

Parameters

data	The initial contents of the field.

9.32.2.4 TableField::TableField (const TableField & field)

Copy constructor.

Parameters

field The field from which to copy.

9.32.2.5 TableField::TableField (TableField && field)

Move constructor.

Parameters

field	The field from which to move.

9.32.2.6 TableField:: \sim TableField ()

Destructor

9.32.3 Member Function Documentation

9.32.3.1 size_t gldb::TableField::length () const [inline]

Returns the length of the field.

Returns

The length of the field.

9.32.3.2 gldb::TableField::operator std::string () const [inline]

Overridden conversion operator.

Returns the field contents as a string.

9.32.3.3 TableField & TableField::operator+= (const char c)

Overridden compound assignment operator.

Parameters

c The character to append to the field.

Returns

A reference to the same field.

9.32.3.4 TableField & TableField::operator+= (const std::string & data)

Overridden compound assignment operator.

Parameters

data	The string to append to the field.	

Returns

A reference to the same field.

9.32.3.5 TableField & TableField::operator= (const char * data)

Overridden assignment operator for const char *.

Parameters

data	The new contents of the field.
------	--------------------------------

Returns

A reference to the same field.

9.32.3.6 TableField & TableField::operator= (const std::string & data)

Overridden assignment operator for std::string.

Parameters

data The new dentents of the hold.	data	The new contents of the field.
------------------------------------	------	--------------------------------

Returns

A reference to the same field.

9.32.3.7 TableField & TableField::operator= (std::string && data)

Overridden assignment operator for std::string with move semantics.

Parameters

data The new contents of the field.

Returns

A reference to the same field.

9.32.3.8 TableField & TableField::operator= (const TableField & field)

Overridden copy assignment operator.

Parameters

field	The field to copy.		

Returns

A reference to the same field.

9.32.3.9 TableField & TableField::operator= (TableField && field)

Overridden move assignment operator.

Parameters

field	The field to move.
-------	--------------------

Returns

A reference to the same field.

9.32.3.10 char& gldb::TableField::operator[](const size_t idx) [inline]

Overridden index operator.

Parameters

idx	The desired index.

Returns

A reference to the character at the specified index.

9.32.3.11 const char& gldb::TableField::operator[](const size_t idx) const [inline]

Overridden index operator.

Parameters

idx	The desired index.

Returns

A const reference to the character at the specified index.

9.32.4 Friends And Related Function Documentation

9.32.4.1 std::ostream& operator<<(std::ostream & out, const TableField & field) [friend]

Overridden << operator for printing a field.

Parameters

out	The ostream to which to print.
field	A reference to the field.

Returns

A reference to out.

9.32.5 Member Data Documentation

9.32.5.1 std::string gldb::TableField::m_data [private]

The field contents

The documentation for this class was generated from the following files:

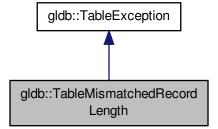

- lib/database/tablefield.h
- lib/database/tablefield.cpp

9.33 gldb::TableMismatchedRecordLength Class Reference

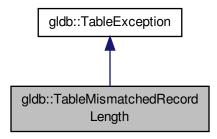

Mismatched record length exception class.

#include <table.h>

 $Inheritance\ diagram\ for\ gldb:: Table Mismatched Record Length:$

Collaboration diagram for gldb::TableMismatchedRecordLength:

Public Member Functions

TableMismatchedRecordLength (const std::string &msg)
 Constructor.

9.33.1 Detailed Description

Mismatched record length exception class.

9.33.2 Constructor & Destructor Documentation

9.33.2.1 gldb::TableMismatchedRecordLength::TableMismatchedRecordLength (const std::string & msg) [inline], [explicit]

Constructor.

Parameters

msg	Database error message

The documentation for this class was generated from the following file:

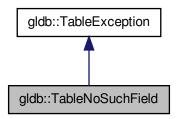

· lib/database/table.h

9.34 gldb::TableNoSuchField Class Reference

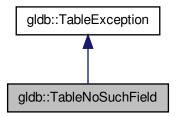

No such field exception class.

#include <table.h>

Inheritance diagram for gldb::TableNoSuchField:

Collaboration diagram for gldb::TableNoSuchField:

Public Member Functions

TableNoSuchField (const std::string &msg)
 Constructor.

9.34.1 Detailed Description

No such field exception class.

9.34.2 Constructor & Destructor Documentation

9.34.2.1 gldb::TableNoSuchField::TableNoSuchField (const std::string & msg) [inline], [explicit]

Constructor.

Parameters

msg	Database error message

The documentation for this class was generated from the following file:

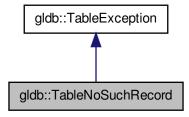

• lib/database/table.h

9.35 gldb::TableNoSuchRecord Class Reference

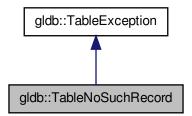

No such record exception class.

```
#include <table.h>
```

Inheritance diagram for gldb::TableNoSuchRecord:

Collaboration diagram for gldb::TableNoSuchRecord:

Public Member Functions

TableNoSuchRecord (const std::string &msg)
 Constructor.

9.35.1 Detailed Description

No such record exception class.

9.35.2 Constructor & Destructor Documentation

9.35.2.1 gldb::TableNoSuchRecord::TableNoSuchRecord (const std::string & msg) [inline], [explicit]

Constructor.

Parameters

msg Database error message

The documentation for this class was generated from the following file:

· lib/database/table.h

9.36 gldb::TableRow Class Reference

Database table row class.

#include <tablerow.h>

Public Member Functions

- TableRow ()
- TableRow (const size_t size)

Constructor with initial number of fields.

TableRow (const std::vector< std::string > &vec)

Constructor with string vector.

TableRow (std::vector< std::string > &&vec)

Constructor with string vector and move semantics.

TableRow (std::initializer_list< std::string > i)

Constructor with std::string initializer list.

TableRow (const TableRow &row)

Copy constructor.

TableRow (TableRow &&row)

Move constructor.

• TableRow & operator= (const TableRow &row)

Copy assignment operator.

TableRow & operator= (TableRow &&row)

Move assignment operator.

- ∼TableRow ()
- size t size () const

Returns the number of fields.

• iterator begin ()

Returns iterator for beginning.

• iterator end ()

Returns iterator for end plus one.

• const_iterator begin () const

Returns const iterator for beginning.

const_iterator end () const

Returns const iterator for end plus one.

TableField & operator[] (const size_t idx)

Overridden index operator.

const TableField & operator[] (const size_t idx) const

Overridden index operator.

void append_field (const char *new_field)

Appends a field to the row.

void append_field (const std::string &new_field)

Appends a field to the row.

void append_field (std::string &&new_field)

Appends a field to the row with move semantics.

void append_field (const TableField &new_field)

Appends a field to the row.

void append_field (TableField &&new_field)

Appends a field to the row with move semantics.

· void print (std::ostream &stream) const

Prints a row.

• std::string record_string (const std::vector< bool > "ed) const

Creates a comma separated string of fields.

• std::string record_string () const

Creates an unquoted comma separated string of fields.

Private Attributes

std::vector< TableField > m fields

9.36.1 Detailed Description

Database table row class.

9.36.2 Constructor & Destructor Documentation

```
9.36.2.1 TableRow::TableRow()
```

Default constructor

```
9.36.2.2 TableRow:TableRow (const size_t size ) [explicit]
```

Constructor with initial number of fields.

Parameters

size The initial number of fields.

```
9.36.2.3 TableRow::TableRow ( const std::vector < std::string > & vec ) [explicit]
```

Constructor with string vector.

Parameters

vec	The vector.

9.36.2.4 TableRow::TableRow (std::vector < std::string > && vec) [explicit]

Constructor with string vector and move semantics.

Parameters

vec The vector.

9.36.2.5 TableRow::TableRow (std::initializer_list< std::string > i) [explicit]

Constructor with std::string initializer list.

Parameters

i The initializer list.

9.36.2.6 TableRow::TableRow (const TableRow & row)

Copy constructor.

Parameters

row The row to copy.

9.36.2.7 TableRow::TableRow (TableRow && row)

Move constructor.

Parameters

row The row to move.

9.36.2.8 TableRow:: \sim TableRow ()

Destructor

9.36.3 Member Function Documentation

9.36.3.1 void TableRow::append_field (const char * new_field)

Appends a field to the row.

Parameters

new_field The contents of the new field.

9.36.3.2 void TableRow::append_field (const std::string & new_field)

Appends a field to the row.

Parameters

new_field The contents of the new field.

9.36.3.3 void TableRow::append_field (std::string && new_field)

Appends a field to the row with move semantics.

Parameters

new_field The contents of the new field.

9.36.3.4 void TableRow::append_field (const TableField & new_field)

Appends a field to the row.

Parameters

new_field A field from which to copy.

9.36.3.5 void TableRow::append_field (TableField && new_field)

Appends a field to the row with move semantics.

Parameters

new_field | A field from which to copy.

9.36.3.6 iterator gldb::TableRow::begin() [inline]

Returns iterator for beginning.

Returns

Iterator for beginning.

9.36.3.7 const_iterator gldb::TableRow::begin () const [inline]

Returns const iterator for beginning.

Returns

Const iterator for beginning.

9.36.3.8 iterator gldb::TableRow::end() [inline]

Returns iterator for end plus one.

Returns

Iterator for end plus one.

9.36.3.9 const_iterator gldb::TableRow::end () const [inline]

Returns const iterator for end plus one.

Returns

Const iterator for end plus one.

9.36.3.10 TableRow & TableRow::operator= (const TableRow & row)

Copy assignment operator.

Parameters

row	The row to copy.		

Returns

A reference to the assigned-to row.

9.36.3.11 TableRow & TableRow::operator= (TableRow && row)

Move assignment operator.

Parameters

row	The row to move.
-----	------------------

Returns

A reference to the assigned-to row.

9.36.3.12 TableField& gldb::TableRow::operator[](const size_t idx) [inline]

Overridden index operator.

Parameters

idx	The zero-based index of the field.

Returns

A reference to the field at the specified index.

9.36.3.13 const TableField& gldb::TableRow::operator[](const size_t idx) const [inline]

Overridden index operator.

Parameters

idx	The zero-based index of the field.

Returns

A const reference to the field at the specified index.

9.36.3.14 void TableRow::print (std::ostream & stream) const

Prints a row.

Parameters

stream	The ostream to which to print.

9.36.3.15 std::string TableRow::record_string (const std::vector< bool > & quoted) const

Creates a comma separated string of fields.

Parameters

quoted	A vector of bool, for each field true means that field will be enclosed in single quotes in the	
	comma separated string, false means it will not be.	

Returns

The comma separated string.

9.36.3.16 std::string TableRow::record_string () const

Creates an unquoted comma separated string of fields.

Returns

The unquoted comma separated string.

9.36.3.17 size_t gldb::TableRow::size() const [inline]

Returns the number of fields.

Returns

The number of fields.

9.36.4 Member Data Documentation

9.36.4.1 std::vector<TableField> gldb::TableRow::m_fields [private]

A vector of fields

The documentation for this class was generated from the following files:

- lib/database/tablerow.h
- lib/database/tablerow.cpp

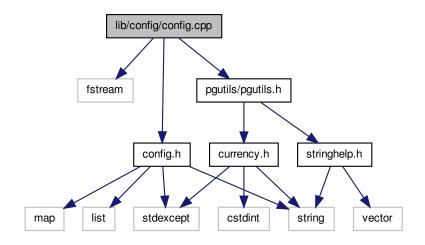

Chapter 10

File Documentation

10.1 lib/config/config.cpp File Reference

Implementation of program configurations class.

```
#include <fstream>
#include "config.h"
#include "pgutils/pgutils.h"
Include dependency graph for config.cpp:
```

10.1.1 Detailed Description

Implementation of program configurations class.

Author

Paul Griffiths

10.2 lib/config/config.h File Reference

Interface to program configurations class.

```
#include <map>
#include <list>
#include <string>
#include <stdexcept>
Include dependency graph for config.h:
```

This graph shows which files directly or indirectly include this file:

Classes

• class genleg::ConfigException

Configuration module exception base class.

• class genleg::ConfigOptionNotSet

Exception class for option not set.

class genleg::ConfigBadOption

Exception class for bad provided option.

• class genleg::ConfigCouldNotOpenFile

Exception class for when conf file cannot be opened.

· class genleg::ConfigBadConfigFile

Exception class for badly formed configuration file.

· class genleg::Config

Configuration options class.

Enumerations

• enum genleg::Argument

Enumeration class for option argument specifications.

10.2.1 Detailed Description

Interface to program configurations class.

Author

Paul Griffiths

#include <string>
#include "gldb/gluser.h"
Include dependency graph for dbsqlstatements.h:
```

This graph shows which files directly or indirectly include this file:

Classes

· class genleg::DBSQLStatements

SQL statements class.

10.29.1 Detailed Description

Implementation of SQL module standalone functions. Interface to SQL statements class.

Author

Paul Griffiths

Copyright

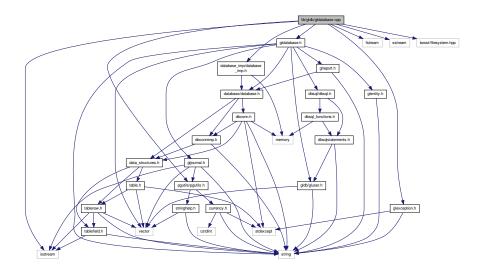

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

10.30 lib/gldb/gldatabase.cpp File Reference

Implementation of General Ledger database class.

```
#include <iostream>
#include <fstream>
#include <sstream>
#include <boost/filesystem.hpp>
#include "gldatabase.h"
#include "glexception.h"
#include "database_imp/database_imp.h"
#include "pgutils/pgutils.h"
```

Include dependency graph for gldatabase.cpp:

Functions

- static bool boolstring_to_bool (const std::string &bs)
 Converts a string representation of a bool to a bool.
- m_views ({"current_trial_balance","check_total","all_jes"})

10.30.1 Detailed Description

Implementation of General Ledger database class.

Author

Paul Griffiths

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

10.30.2 Function Documentation

```
10.30.2.1 static bool boolstring_to_bool ( const std::string & bs ) [static]
```

Converts a string representation of a bool to a bool.

Parameters

```
bs The bool string.
```

Returns

true if bs contains "1" or "TRUE", false if bs contains "0" or "FALSE".

Exceptions

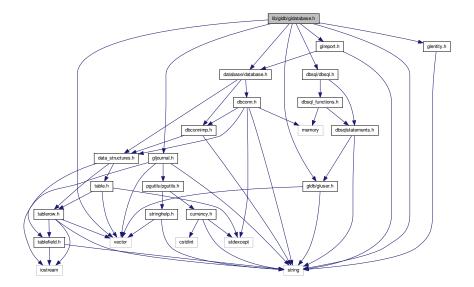

```
GLDBException if bs contains any other value.
```

10.31 lib/gldb/gldatabase.h File Reference

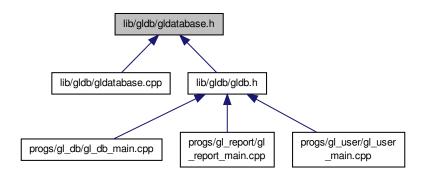

Interface to General Ledger database class.

```
#include <vector>
#include <string>
#include "database/database.h"
#include "dbsql/dbsql.h"
#include "gluser.h"
#include "glreport.h"
#include "gljournal.h"
#include "glentity.h"
```

Include dependency graph for gldatabase.h:

This graph shows which files directly or indirectly include this file:

Classes

• class genleg::GLDatabase

General ledger database class.

• class genleg::GLDBTransaction

Database transaction RAII class.

10.31.1 Detailed Description

Interface to General Ledger database class.

Author

Paul Griffiths

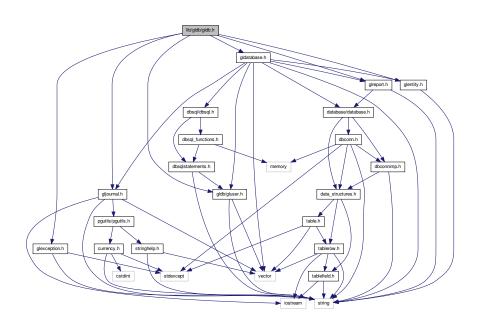

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

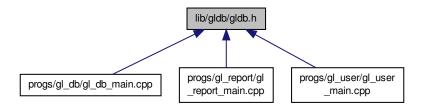

10.32 lib/gldb/gldb.h File Reference

User interface to General Ledger database module.

```
#include "glexception.h"
#include "gldatabase.h"
#include "gluser.h"
#include "glreport.h"
#include "gljournal.h"
#include "glentity.h"
Include dependency graph for gldb.h:
```

This graph shows which files directly or indirectly include this file:

10.32.1 Detailed Description

User interface to General Ledger database module.

Author

Paul Griffiths

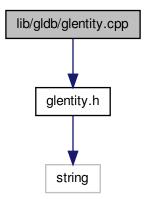

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

10.33 lib/gldb/glentity.cpp File Reference

Implementation of general ledger entity class.

```
#include "glentity.h"
Include dependency graph for glentity.cpp:
```

10.33.1 Detailed Description

Implementation of general ledger entity class.

Author

Paul Griffiths

Copyright

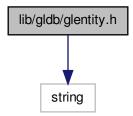

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

10.34 lib/gldb/glentity.h File Reference

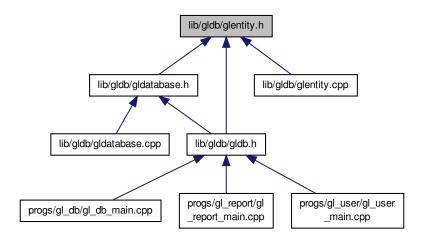

Interface to general ledger entity class.

#include <string>

Include dependency graph for glentity.h:

This graph shows which files directly or indirectly include this file:

Classes

class genleg::GLEntity
 General ledger entity class.

10.34.1 Detailed Description

Interface to general ledger entity class.

Author

Paul Griffiths

Copyright

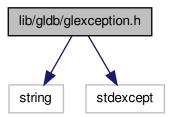

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

10.35 lib/gldb/glexception.h File Reference

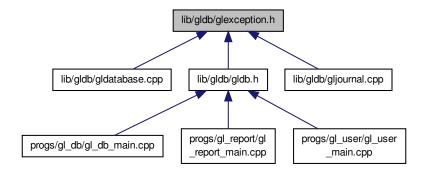

Interface to General Ledger base exception class.

#include <string>
#include <stdexcept>

Include dependency graph for glexception.h:

This graph shows which files directly or indirectly include this file:

Classes

· class genleg::GLDBException

Base general ledger database exceptionc class.

10.35.1 Detailed Description

Interface to General Ledger base exception class.

Author

Paul Griffiths

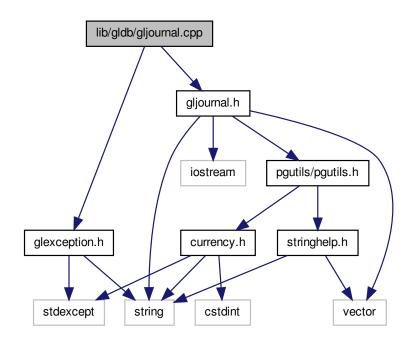

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

10.36 lib/gldb/gljournal.cpp File Reference

Implementation of journal entry classes.

```
#include "gljournal.h"
#include "glexception.h"
Include dependency graph for gljournal.cpp:
```

10.36.1 Detailed Description

Implementation of journal entry classes.

Author

Paul Griffiths

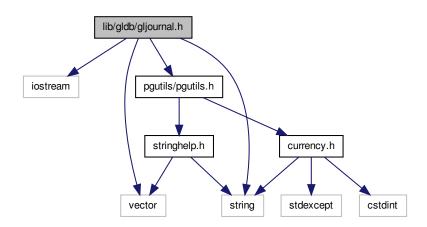

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

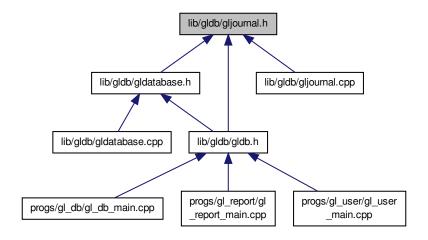

10.37 lib/gldb/gljournal.h File Reference

Interface to journal entry classes.

```
#include <iostream>
#include <vector>
#include <string>
#include "pgutils/pgutils.h"
Include dependency graph for gljournal.h:
```

This graph shows which files directly or indirectly include this file:

Classes

- class genleg::GLJELine
 - Journal entry line class.
- class genleg::GLJournal

Journal entry class.

Functions

• GLJournal genleg::journal_from_stream (std::istream &ifs)

Returns a journal entry from a stream in a standard format.

10.37.1 Detailed Description

Interface to journal entry classes.

Author

Paul Griffiths

Copyright

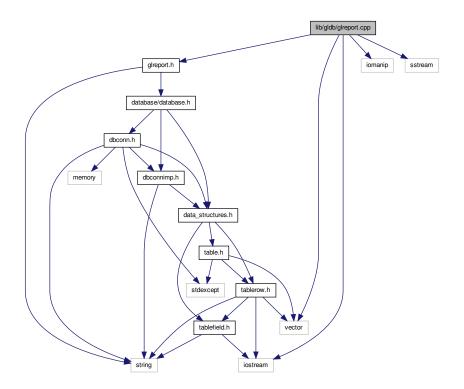

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

10.38 lib/gldb/glreport.cpp File Reference

Implementation of report class.

```
#include <vector>
#include <iomanip>
#include <iostream>
#include <sstream>
#include "glreport.h"
```

Include dependency graph for glreport.cpp:

Functions

static std::vector< size_t > max_column_widths (const gldb::Table &table)

Calculates the maximum required column widths for a table.

static void grow_widths (std::vector < size_t > &widths, const TableRow &row)

Increments a vector of required column widths.

static std::string separator_row (const std::vector< size_t > &widths)

Returns a decorated separator row for a table.

- static std::string plain_row (const TableRow &row, const std::vector < size_t > &widths)

Returns a row for a plain report.

static std::string decorated_row (const TableRow &row, const std::vector < size_t > &widths)

Returns a row for a decorated report.

10.38.1 Detailed Description

Implementation of report class.

Author

Paul Griffiths

Copyright

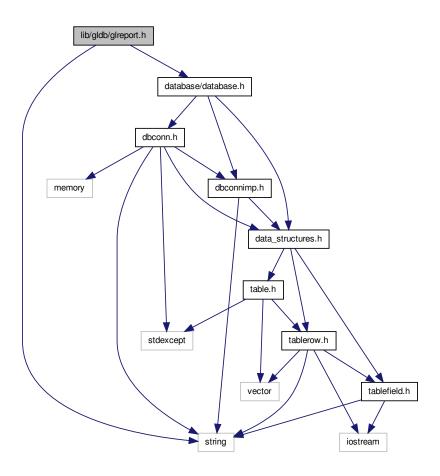

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

10.39 lib/gldb/glreport.h File Reference

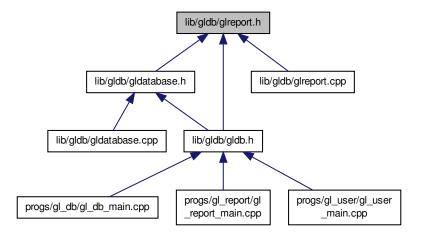

Interface to report class.

```
#include <string>
#include <database/database.h>
```

Include dependency graph for glreport.h:

This graph shows which files directly or indirectly include this file:

Classes

· class genleg::GLReport

General ledger report class.

Functions

• std::string genleg::plain_report_from_table (const gldb::Table &table)

Creates a plain report from a table.

• std::string genleg::decorated_report_from_table (const gldb::Table &table)

Creates a decorated report from a table.

• std::ostream & genleg::operator<< (std::ostream &out, const GLReport &report)

Overridden << operator for printing a report.

10.39.1 Detailed Description

Interface to report class.

Author

Paul Griffiths

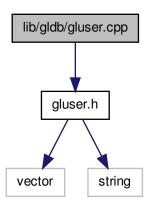

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

10.40 lib/gldb/gluser.cpp File Reference

Implementation of user class.

```
#include "gluser.h"
Include dependency graph for gluser.cpp:
```

10.40.1 Detailed Description

Implementation of user class.

Author

Paul Griffiths

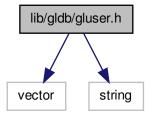

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

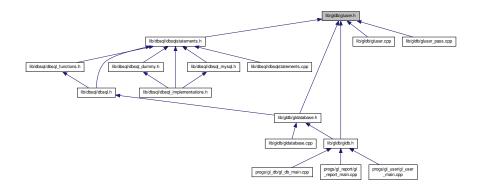

10.41 lib/gldb/gluser.h File Reference

Interface to user class.

#include <vector>
#include <string>
Include dependency graph for gluser.h:

This graph shows which files directly or indirectly include this file:

Classes

· class genleg::GLUser

General ledger user class.

10.41.1 Detailed Description

Interface to user class.

Author

Paul Griffiths

Copyright

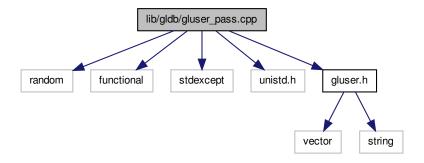

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

10.42 lib/gldb/gluser_pass.cpp File Reference

Implementation of password functions for user class.

```
#include <random>
#include <functional>
#include <stdexcept>
#include <unistd.h>
#include "gluser.h"
```

Include dependency graph for gluser_pass.cpp:

Macros

• #define _XOPEN_SOURCE 600

Functions

• static std::string generate_salt ()

Generates a random two-character salt for crypt()

10.42.1 Detailed Description

Implementation of password functions for user class.

Todo Implement a better form of password encryption. In particular, these functions are not re-entrant, and only use the first 8 characters of the password.

Author

Paul Griffiths

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

10.42.2 Macro Definition Documentation

10.42.2.1 #define _XOPEN_SOURCE 600

UNIX feature test macro

10.42.3 Function Documentation

```
10.42.3.1 static std::string generate_salt( ) [static]
```

Generates a random two-character salt for crypt()

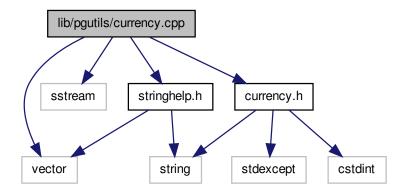

Returns

The two-character salt.

10.43 lib/pgutils/currency.cpp File Reference

Implementation of currency amount class.

```
#include <vector>
#include <sstream>
#include "currency.h"
#include "stringhelp.h"
Include dependency graph for currency.cpp:
```

10.43.1 Detailed Description

Implementation of currency amount class.

Author

Paul Griffiths

Copyright

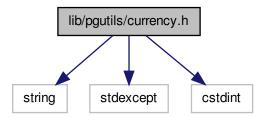

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

10.44 lib/pgutils/currency.h File Reference

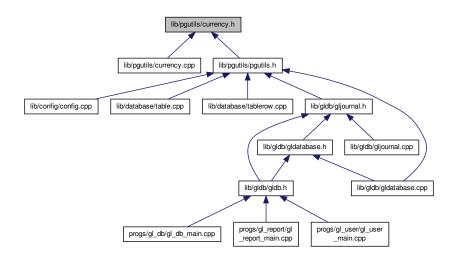

Interface to currency amount class.

```
#include <string>
#include <stdexcept>
#include <cstdint>
```

Include dependency graph for currency.h:

This graph shows which files directly or indirectly include this file:

Classes

class pgutils::CurrencyException

Base Currency exception class.

· class pgutils::Currency

Currency amount class.

Functions

• Currency pgutils::operator+ (Currency lhs, const Currency &rhs)

Currency addition operator.

• Currency pgutils::operator- (Currency lhs, const Currency &rhs)

Currency subtraction operator.

• bool pgutils::operator== (const Currency &lhs, const Currency &rhs)

Currency equality comparison operator.

• bool pgutils::operator!= (const Currency &lhs, const Currency &rhs)

Currency inequality comparison operator.

bool pgutils::operator< (const Currency &lhs, const Currency &rhs)

Currency less than comparison operator.

bool pgutils::operator> (const Currency &lhs, const Currency &rhs)

Currency greater than comparison operator.

bool pgutils::operator<= (const Currency &lhs, const Currency &rhs)

Currency less than or equal to comparison operator.

• bool pgutils::operator>= (const Currency &lhs, const Currency &rhs)

Currency greater than or equal to comparison operator.

• Currency pgutils::currency_from_string (const std::string &s)

Creates a currency amount from a string representation.

10.44.1 Detailed Description

Interface to currency amount class.

Author

Paul Griffiths

Copyright

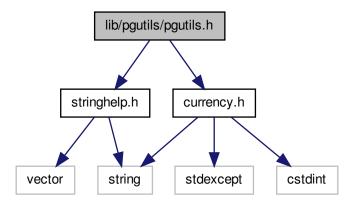

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

10.45 lib/pgutils/pgutils.h File Reference

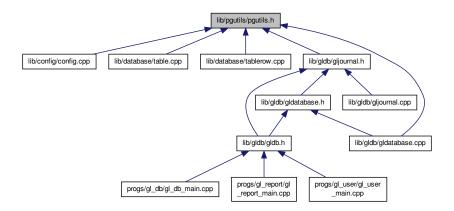

Aggregate interface to general utility functions.

```
#include "stringhelp.h"
#include "currency.h"
```

Include dependency graph for pgutils.h:

This graph shows which files directly or indirectly include this file:

10.45.1 Detailed Description

Aggregate interface to general utility functions.

Author

Paul Griffiths

Copyright

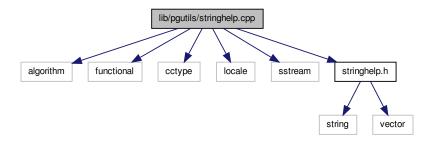

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

10.46 lib/pgutils/stringhelp.cpp File Reference

Implementation of string helper functions.

```
#include <algorithm>
#include <functional>
#include <cctype>
#include <locale>
#include <sstream>
#include "stringhelp.h"
```

Include dependency graph for stringhelp.cpp:

10.46.1 Detailed Description

Implementation of string helper functions.

Author

Paul Griffiths

Copyright

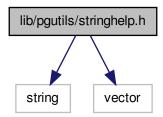

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http://www.gnu.org/licenses/

10.47 lib/pgutils/stringhelp.h File Reference

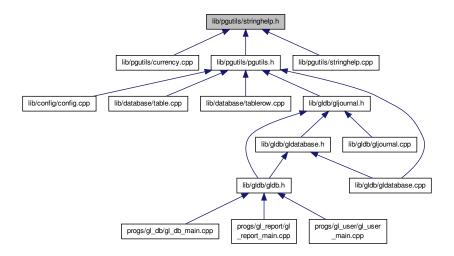

Interface to string helper functions.

```
#include <string>
#include <vector>
```

Include dependency graph for stringhelp.h:

This graph shows which files directly or indirectly include this file:

Functions

• std::string & pgutils::trim front (std::string &s)

Trims leading whitespace from a string.

• std::string & pgutils::trim_back (std::string &s)

Trims trailing whitespace from a string.

• std::string & pgutils::trim (std::string &s)

Trims leading and trailing whitespace from a string.

• std::vector< std::string > pgutils::split (const std::string &s, const char delim)

Splits a delimited string into tokens.

std::vector< std::string > & pgutils::split (std::vector< std::string > &vec, const std::string &s, const char delim)

Splits a delimited string into tokens.

• bool pgutils::next content line (std::istream &ifs, std::string &s)

Gets the next content line from a stream.

• std::vector< std::string > & pgutils::content_lines (std::vector< std::string > &vec, std::istream &ifs)

Populates a vector of content lines from a stream.

std::vector< std::vector

< std::string > > & pgutils::split_lines (std::vector< std::vector< std::string >> &vec, std::istream &ifs, const char delim)

Populates a vector of vectors of fields from a stream.

std::string & pgutils::join (const std::vector< std::string > &vec, std::string &s, const char delim)

Joins a vector of strings into a delimited line.

• bool pgutils::replace (std::string &str, const std::string &from, const std::string &to)

Replaces a substring with another string.

10.47.1 Detailed Description

Interface to string helper functions.

10.48 progs/gl_db/gl_db_main.cpp File Reference

Main functionality for gl_db program.

```
#include <iostream>
#include "gldb/gldb.h"
#include "config/config.h"
Include dependency graph for gl_db_main.cpp:
```

Functions

• static void set_configuration (Config &config, int argc, char *argv[])

Sets program configuration options.

static bool check help and version (const Config &config)

Prints help or version messages if requested.

static bool check_db_parameters (const Config &config)

Checks if database, hostname and username were provided.

• static void print_usage_message ()

Prints a program usage message.

• static void print_version_message ()

Prints a program version message.

• static void print_help_message ()

Prints a program help message.

• static std::string login (void)

Gets a password from the terminal.

• int main (int argc, char *argv[])

Main function.

Variables

static const char * progname = "gl_db"
 Static variable for program name.

10.48.1 Detailed Description

Main functionality for gl db program.

Author

Paul Griffiths

Copyright

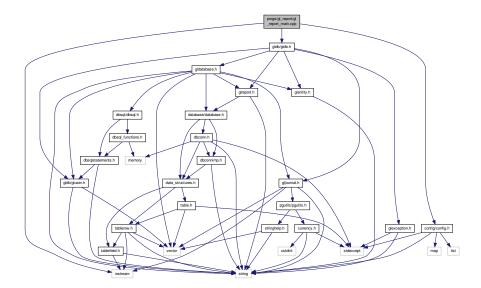

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

Main functionality for gl_report program.

```
#include <iostream>
#include "gldb/gldb.h"
#include "config/config.h"
```

Include dependency graph for gl_report_main.cpp:

Functions

- static void set_configuration (Config &config, int argc, char *argv[])
 Sets program configuration options.
- static bool check_help_and_version (const Config &config)

Prints help or version messages if requested.

static bool check_db_parameters (const Config &config)

Checks if database, hostname and username were provided.

- static void print_usage_message ()
 - Prints a program usage message.
- static void print_version_message ()

Prints a program version message.

- static void print_help_message ()
 - Prints a program help message.
- static std::string login (void)

Gets a password from the terminal.

• int main (int argc, char *argv[])

Main function.

Variables

static const char * progname = "gl_report"
 Static variable for program name.

10.50 progs/gl_user/gl_user_main.cpp File Reference

Main functionality for gl_user program.

```
#include <iostream>
#include "gldb/gldb.h"
#include "database/database.h"
#include "config/config.h"
Include dependency graph for gl_user_main.cpp:
```

Functions

- static void set_configuration (Config &config, int argc, char *argv[])
 - Sets program configuration options.
- static bool check_help_and_version (const Config &config)
 - Prints help or version messages if requested.
- static bool check_db_parameters (const Config &config)
 - Checks if database, hostname and username were provided.
- GLUser get_user (Config &config, GLDatabase &gdb)
 - Returns a user from either an ID or a name.
- static void show_user_details (const GLUser &user)
 - Outputs details for a user.
- static void enable_user (GLUser &user, Config &config, GLDatabase &gdb)
 - Enables or disables a user.
- static void set_user_password (GLUser &user, Config &config, GLDatabase &gdb)
 - Sets a user's password.
- static void check_user_password (GLUser &user, Config &config)
 - Checks a user's password.
- static void print_usage_message ()

Prints a program usage message.

• static void print_version_message ()

Prints a program version message.

• static void print_help_message ()

Prints a program help message.

• static std::string login (void)

Gets a password from the terminal.

• int main (int argc, char *argv[])

Main function.

Variables

static const char * progname = "gl_user"
 Static variable for program name.
